COMPLETE ASSORTMENT OF KITCHEN GARDEN SEEDS

FOR PRIVATE FAMILIES.

These assortments contain only the most approved and choicest sorts, such as we confidently recommend as sure to give satisfaction. The quantities in the various assortments are carefully arranged to suit large and small gardens, and purchasers may thus be free from the doubt often felt as to the proper quantity to buy.

NAMES.	VARIETIES.	No. 1. \$5. By Mail, \$5.75.	No. 2. \$10. By Mail, \$11.50.	No. 3. \$18. By Mail, \$21.	No. 4. \$25.
Beans	Early Valentine	1 pt.	1 qt.	1 qt.	2 qt.
"	Refugee			1 qt.	2 qt.
"	Valentine Wax	1 pt.	1 qt.	1 qt.	1 qt.

J. M. THORBURN & CO. ANNUAL CATALOGUE HIGH-CLASS SEEDS

IN ISSUING our Ninety-fifth Annual Catalogue, we would observe that our leading business principle has always been to supply only the very HIGHEST CLASS of seeds, and the fact that we have commanded the leading wholesale and market-gardeners' trade of this country for nearly a century should justify our claim to the patronage of those who have not yet experienced the advantage of dealing with us.

WE would call attention to the descriptions and directions given in this Catalogue concerning each variety of seeds and their culture. They are as full and explicit as the limited space of a Catalogue will admit, and worthy of constant reference and study. The directions are derived from years of experience, and aim to meet the requirements of soil, climate and culture in and around New York. For more northern or southern localities, changes in the time of sowing, etc., are, of course, necessary, and will readily suggest themselves to gardeners.

WHENEVER our Customers desire it, we will select an assortment of seasonable seeds, suited to their wants. All such orders will receive especial care and attention. The only information we require is the size of the garden and the sum proposed to be expended for seeds. We would advise making an early test of seeds by sowing some of each variety in a flower pot, and keeping them warm and well watered.

WRITE orders upon a blank sheet, separate from letter. Orders from new customers should be accompanied by a Post Office or Express Money Order, if convenient, or bank-bills, if the amount enclosed is not large. Address, always, J. M. THORBURN & CO., 15 JOHN ST., NEW YORK.

PRICES.—The prices quoted are those ruling at this date, and do *not* include free transit, except for flower seeds in packets. Please add for prepayment of postage or express, as below noted. **All ordinary sorts of seed can be had in five-cent papers.**

SEEDS by Mail or Express.—8 cents per pound should be added for prepayment of postage, if wanted by mail. Charges by express are not uniform, rates depending on distance and locality. Except for small parcels, and to remote parts, the express companies will be found the most economical mode of conveyance; of course, we shall always adopt that mode which costs the least. Neither have we charged for a guarantee of safe arrival by mail; it is rare, however, that seeds fail to reach their destination safely in that way.

IT IS very important that our customers send in their orders immediately on receipt of this Catalogue, instead of waiting till the time when they wish to sow the seed; and to save time, seeds may be ordered by the numbers in the first column, if desired.

NAME, Address, etc.—We beg our correspondents to give us very exactly, *on EACH of their orders, their name and address*; also, to indicate *very precisely* the means of carriage which they prefer, whether by EXPRESS, FREIGHT OR MAIL, and the office or railroad station which best serves their locality. In case these directions are not followed out, or if they are not sufficient, we shall choose ourselves the most advantageous and convenient means, but entirely at the risk of the customer, avoiding ourselves all responsibility.

SHIPMENTS by Express, "C. O. D."—Unless otherwise instructed, we shall send all such goods as go by express C. O. D. Orders from unknown customers not desiring this mode of carriage should be accompanied by the cash.

WARRANTIES.—Seeds of the best possible quality will fail through improper treatment. Thus, if a small seed be sown so deeply that the young plant cannot reach the surface, the seed, however good, will fail. More failures result from a want of proper knowledge of conditions necessary to germination than from bad quality of seeds themselves. These conditions are, a proper temperature, sufficient moisture, and free access of air; besides these, the soil must be in proper condition, and present no physical obstacle to the growth of the young plant. If heavy rains have compacted the surface of the soil, and the sun has baked it to a hard crust, it will be impossible, even if all other conditions are favorable, for the seedling plants to force their way through it, and many perish from this cause alone. Seeds differ greatly as to the temperature required for germination. Beets, Cress, Peas, etc., germinate rapidly at a temperature of 45°; but if Melons and other seeds of that family, bush or pole Beans, and other plants of sub-tropical origin, are sown under the same conditions, they will be apt to decay, as for their prompt germination they require a heat of at least 60°. For this reason many seeds fail yearly from too early sowing. The second condition, proper moisture, is likely to be violated by an excess rather than by too little moisture. The proper amount is that which a well-drained soil will naturally hold. Free access of air is all-important, and this is interfered with by an excess of water in the soil. In germination complex chemical changes take place in the seeds, in which the air performs an important part. A portion of the seed is consumed, carbonic acid gas being given off in changing the starch and other constituents of the seed into nutriment to forward the growth of the germ or embryo plant, which depends upon the contents of the seed until it has formed roots below ground and leaves above, and is able to sustain itself. Besides these conditions, affecting the germination of the seed, the young plants, after they have made their way to the surface, are liable to various accidents; a sudden current of very cold air, or a continued drying wind, may check their growth, or destroy the young plants altogether. In addition, there are numerous insects, both below and above ground, that may attack the plants, some of these being so small that they often destroy a crop before they are discovered.

For the above reasons, we wish to state in this explicit form, that, while we exercise great care to have all Seeds pure, reliable, and true to name, our Seeds are sold without any warranty, expressed or implied, and without any responsibility in respect to the crop. If our Seeds are not accepted on these terms, they must be returned at once.

J. M. THORBURN & CO.,

15 John Street, New York.

DIRECTIONS FOR THE CULTIVATION OF VEGETABLES.

To secure a good crop of vegetables, three things at least are necessary; viz., a suitable soil, pure seed, and clean culture; to which may be added as equally necessary, an *abundant* supply of good barnyard-manure, supplemented, when this runs short, by artificial fertilizers. The exposure for a vegetable garden should be preferably south or southeast, or nearly so. The soil should be naturally rich and friable, a sandy loam being among the best. If the soil be stiff, it should be gradually mellowed by the free use of barnyard-manure, or, if convenient, by the addition of sand. If wet, or inclined to hold an excess of moisture, it should be under-drained, preferably by tile; but if possible, a location should be selected naturally dry and free from surface water.

A dark-colored soil, or one supplied with a goodly portion of decayed vegetable matter, will produce the earliest crops. If the soil be shallow, it should be deepened gradually by plowing or spading an inch or two deeper each year, and not all at once by trenching or sub-soiling, unless manure and money both be abundant. A sandy soil may be greatly improved by adding more or less vegetable mould from the woods. To produce the best and most uniform results, the vegetable garden should have at least one foot of good, rich soil. The roots of large trees should not be allowed to encroach on any part of the garden, though large trees, especially evergreens, sufficiently far off, afford a valuable protection on the north and west.

Mark the garden off into squares or beds of convenient size, to facilitate the practice of a rotation of crops, which is an important matter. As a rule, never let the same crop or kind of vegetable occupy the same bed or spot two years in succession. Potatoes, onions and a few other things may form an exception to this rule, but it is nevertheless better to keep up rotation. Every year these beds must be warmed up by a liberal coat of manure, which should be thoroughly mixed with the soil. Grow everything in drills or straight lines. Larger crops from a given surface are grown in this way, and cultivation becomes simple

and comparatively easy. The space between the drills, and other special information, is given in the body of the catalogue; the least distance is named, in order to economize space; it might be increased in some cases with advantage.

The ground should be frequently hoed to kill the weeds and keep the soil mellow; and the proper time to hoe is just when the weeds appear above ground. Briefly, the proper way to kill weeds is never to let them grow. If the weeding be done at the time suggested, it can be mostly and quickly done by the use of a sharp-toothed steel rake.

Where the material and conveniences are at hand, much time may be gained by starting certain kinds of plants in a hot-bed, or even in a cold-frame, the latter being a very convenient thing, even on a small place. The hot-bed is chiefly intended for raising early Tomatoes, Egg-Plants, Peppers, Cabbage, Cauliflower, Lettuce, etc., but as all these plants can now be bought cheaply of the seedsmen at the proper time, the expense and labor of a hot-bed can, in many cases, be dispensed with, especially on small places.

The above brief suggestions, and the special directions dispersed through the catalogue, if carefully observed, will go far toward securing early and abundant crops.

To Prepare a Cold-Frame.—The cold-frame is simply a frame set on the ground, no bottom heat being applied. It is banked up on the outside during the winter with salt hay, straw or coarse litter. The soil is prepared by forking in and thoroughly mixing to the depth of ten or twelve inches a liberal quantity of old, well-rotted manure. The manure of an old hot-bed is good for the purpose. The frame is prepared in the fall, and young Cabbage, Cauliflower and Lettuce plants are set out in it in time to get well established before very cold weather. Cauliflower and Cabbage should be set down to the first leaf, and the soil made firm around the plants. The seed is usually sown, in the vicinity of New York, from the 15th to the 20th of September, but the very early kinds some eight or ten days later. The young plants will be ready to transplant in about twenty-five or thirty days. During cold nights and stormy days, the beds should be closely covered with the sashes, and these further protected by straw mats or shutters. Cauliflower needs more and closer protection than Cabbage, as it is rather more tender. During mild days admit air freely, the object being to keep the plants in a dormant state, without actual freezing, so that when spring comes the plants are in a forward state for setting out early crops. Seeds of Cabbage, Cauliflower, Lettuce and Radish may be sown in a cold-frame in the spring from the last week in February to the first week in March. The frame should stand in a warm and sheltered spot, and be kept from freezing by mats or a thick covering of straw during cold nights.

DIRECTIONS FOR MAKING A HOT-BED.

In the vicinity of New York, from the first to the middle of March is quite early enough to make a hot-bed, and even a little later will do well enough. The time must vary according to the latitude. Provide a quantity of fresh horse-manure from the stables, and add to this, if they can be had, one-third to one-half of its bulk of leaves. Mix them thoroughly, tramping down the mass in successive layers, and form into a large pile, so that fermentation will proceed even in severely cold weather. In two or three days fermentation will be apparent by the escape of steam from the heap. Now turn again, and allow the heap to remain two or three days longer, or until the second fermentation commences. Make an excavation or pit two-and-a-half feet deep, and of a size suited to the number of plants required. The pit will be better if built up of brick. It should be made in some dry, sheltered spot, facing the south or east, if possible. Hot-bed sashes are usually 6x3 feet, and one sash will generally give early plants enough for a large family. The frame for sashes should be eighteen inches high at the back and twelve inches in front, which will give the proper slope to catch the sunlight. Cross-pieces should be placed for the sashes to slide on, to facilitate opening and shutting the frames. When everything is ready, the manure is placed in the pit and trodden down firmly in layers to the required depth, two to two-and-a-half feet. Then put on the sashes, and keep the pit closed until the heat rises. At first it will probably be 100° or more, which is too hot to sow the seed in; but in two or three days it will subside to 90° or a little less, when the soil may be put on to the depth of six to eight inches. The heat may be readily ascertained by plunging a thermometer in the manure. The soil should be of well-rotted sod (or common garden soil will do), mixed with about a third of fine, old manure, and in this the seeds may be sown thinly in drills two or three inches apart, and afterwards (as soon as out of the seed-leaf) either thinned out or else transplanted to another frame. Air must be given every mild day by raising the sashes at the back. Water with tepid water whenever necessary, and during cold nights and snow storms keep covered with straw mats or board shutters. Tomatoes, Peppers and Egg-Plants should be sown in a separate frame from the Cabbage, Cauliflower and Lettuce, as they require more heat than the latter. The same directions may apply to hot-beds made on the surface of the ground, except that the manure should be at least a foot wider on all sides than the frame.

New, Rare and Valuable Flower Seeds.

Alyssum maritimum, Thorburn Bouquet.

This new improved Sweet Alyssum is exceedingly dwarf and compact, and of the neatest possible habit. It is very suitable for borders or pots. Per packet, 10 cts.

CARNATION, DOUBLE PERPETUAL.

Aster, Giant Comet, "The Bride."

White, changing to rose, is the nearest description one can give of the very lovely coloring of this new variety of the Giant Comet Aster, the flowers being first pure white, then white changing to rose, and finally of a beautiful rose tint. It need hardly be said that this color is most effective in the Giant Comet Aster, with its long, wavy petals, like those of the Japanese chrysanthemum. Per packet, 25 cts.

Aster, Princess, "Rosalind."

This is a rose-colored variety of the well-known Snowball or Princess Aster. It has the same round, short-petalled Lilliput dahlia-like flowers, and is as floriferous and continues as long in bloom as the Snowball. The blossoms are of a most charming bright rose color, and the whole plant possesses a beauty and elegance which few other Asters can rival. Per packet, 20 cts.

Begonia odorata, "Aurora."

The flowers of this new tuberous-rooted Begonia are remarkable for their delicious fragrance, which resembles that of the Tea rose. The plants are healthy and of vigorous growth, and of very compact form, with thick, waxy dark green leaves, copper-red on the back. The flowers measure about three inches across, are of a very brilliant copper-crimson color, and produced in great profusion. Excellent for pot-culture. Per packet, 25 cts.

Carnation, Double Perpetual. (New.)

This new Carnation was raised by Mr. Chabaud, the foremost Carnation grower of Europe. It is the most valuable of his introductions, and this alone is a sufficient guarantee of its excellence to all who are familiar with the work of this distinguished specialist. The plant grows from 16 to 20 inches high, is closely branched, and carries its blooms well.

The straight, vertical flower-stems are covered with large, handsome, very double flowers in every variety of color. It will be found invaluable for florists. It blooms in about seven months after being sown, and continues to flower in the greatest profusion indefinitely. It possesses all the good qualities of the best Tree Carnations, together with the earliness of the Margaret Carnation, and produces double flowers at the rate of 80 to 90 per cent. In view of its earliness, hardiness, robust growth, perfect bearing, variety of color of the flowers, and the long continued time in which they are produced, it is likely to supersede all varieties hitherto grown. The seed we offer was saved exclusively in the Garden of Carnations of Provence, by Mr. Chabaud himself. It may be sown either in autumn or early spring. Per packet, 50 cts.

New Celosia, "Ostrich Feather."

This new Feathered Celosia produces very large plumes, which are exquisitely curved and curled in exact resemblance of an ostrich feather. The plant grows about 3 feet high, is of handsome pyramidal form, and the numerous massive plumes, waving gracefully above the foliage, make it one of the most effective ornamental plants for either pot or outdoor culture. It is of easy cultivation, requiring the same treatment as the ordinary cockscomb.

Per pkt.

Crimson \$0 10
Orange 10

Chrysanthemum maximum, "Perfection."

The "Perfection" is the result of many years' labor in improving the *Chrysanthemum maximum*. The originator aimed especially at large flowers and abundant blooming plants, and in both he has been most successful. This seed produces only the very largest flowers, some of them measuring 6 inches in diameter. It is decidedly one of the best white cut-flowers in cultivation, and the plant itself is also most effective. Per packet, 25 cts.

NEW CELOSIA, "OSTRICH FEATHER."

Datura, "Golden Queen." (New.)

This superb new variety has all the fine qualities of the popular *D. cornucopia*, but, on account of its brilliant yellow flowers, it is a much more showy and effective plant. From seed sown in the open ground it grows in a single season to a height of 2½ feet, forming a stocky, very bushy and compact plant, requiring no support. The flowers are of gigantic size, many of them 10 inches long, very double, and produced in great numbers. It makes a magnificent pot-plant, and is admirably adapted for massing and backgrounds, the large bright flowers contrasting strikingly with the dark green foliage. Per packet, 10 cts.

CHRYSANthemum MAXIMUM, "PERFECTION." See page 4.

Dianthus laciniatus, "Salmon Queen."

A new annual Pink of the popular Heddewigii class. The flowers are of a very distinct and perfectly new tint in this class, being of the most brilliant salmon color, changing to salmony rose when fading. The flowers are well formed and beautifully fringed. Seventy-five per cent. of the plants will come true from seed. Per packet, 25 cts.

Dianthus superbus Telekii.

This new variety of Pink is the result of a cross between *Dianthus superbus* and *Dianthus Chinensis*. The plant possesses the excellence of both parents without the faults of either. It is an abundant bloomer. The flowers are mostly faultless double, and in color from purple to dark carmine and violet. The plants are very hardy and of strong growth. Per packet, 30 cts.

DIANTHUS LACINIATUS, "SALMON QUEEN."

Godetia Whitneyi, "Mandarin."

The flowers of this new Godetia are of a delicate yellow color, a most valuable addition to the assortment of colors found in this popular annual. The form of the flower, too, differs from the usual, each petal being slightly wrinkled at the upper edge. A whole bed or border of this new Godetia in contrast with

the other dark red sorts, is very effective, and it will undoubtedly soon become a popular favorite. Per packet, 25 cts.

GREVILLEA ROBUSTA.

Grevillea robusta. (Silk Oak.)

A tender perennial, growing about 5 feet high, with very beautiful and graceful foliage. It is one of our most elegant ornamental plants for the greenhouse and for table decorations, combining the delicate foliage of a fern with the stately grace of a palm. Per packet, 10 cts.

Marigold, "Pride of the Garden."

A new, very dwarf variety of regular, compact habit and very floriferous. The flowers are extra large, extremely double, of a beautiful rich, golden yellow color, and produced earlier than those of any other sort. Will be desirable for showing a solid golden yellow effect. Per packet, 10 cts.

Matricaria "Golden Ball." (*Eximia grandiflora corymbosa aurea fl. pl.*)

This pretty novelty forms a densely compact bush about 13 inches high, profusely covered with a multitude of quilled flowers of a very rich and intense golden yellow. Apart from general habit, *Matricaria* "Golden Ball" is entirely distinct from the older varieties, of a more or less yellowish tint, and surpasses them by reason of its telling color, which is of the most striking intensity. It will be found equally useful for groups and borders, as well as for cutting purposes. Per pkt., 25 cts.

MATRICARIA "GOLDEN BALL."

Mimulus hybridus "Diadem."

This novelty is distinguished for its dwarf and compact habit and stiff stem. The foliage is dark green, and the flowers, which are most richly colored, are borne in great numbers. It is suitable for borders, groups or potting. Per pkt., 30 cts.

Nasturtium, "Lilliput."

This is an entirely new class of Dwarf Nasturtiums, and one which deserves the greatest attention. The plant is in every respect smaller than Tom Thumb, and the dainty little flowers, produced in the greatest profusion and peering up well above the small-cut and bushy foliage, make it one of the prettiest annuals imaginable. The blossoms are of various and showy colors, and it is especially noteworthy that the further one that the seed is much smaller than in Tom Thumb Nasturtiums, are the best evidence that we have here an entirely new break in the *Tropæolum* family. Separate colors have not yet been fixed, but the mixture will be found highly effective and excellent for groups and borders. Per pkt., 25 cts.

Pansy, "Fiery Faces."

The Pansy, "Fiery Faces," is of compact growth, and the flowers are of pleasing shape. The color is purple-scarlet, with yellow margin and yellow eye. The three lower petals are regularly marked with large, velvety purple-black spots. In spring and autumn they are particularly brilliant. A bed of the small "Fiery Faces" produces an effect as surprising as it is agreeable, and bestows on this interesting and charming novelty quite a peculiar merit as a show-flower for bed or border. Per pkt., 30 cts.

Superb New Large-flowered Petunias.

Ruffled Giants. New; very large flowered; ruffled, fluted and fringed. Striped and mottled, blotched and solid self-colors. Per packet, 50 cts.

Ring of Emerald. Large pink and crimson flowers, bordered with green. Per pkt., 50 cts.

"The Rainbow." Throats intense yellow; richest colorings. Pkt., 50c.

Six-lobed White. Large, pure white, giving a large proportion of blossoms with six lobes. Per pkt., 50 cts.

**Rosa multiflora nana.**

This new dwarf Polyantha Rose flowers the first season from seed sown in the open ground. If started early in frames, or in boxes indoors, and transplanted to the outside, like asters, the plants will be in full bloom as early as July, and they will continue flowering in extraordinary profusion until late in the fall. The large, double flowers are of perfect form, and are produced in every color exhibited by other Roses. The plants grow only about 15 inches high, forming very neat, compact bushes about 3 feet in circumference. They are suitable for growing in pots or vases, as well as for massing in groups and for borders. The unique value of a Rose which can be grown from seed sown in open ground to bloom the same season will be readily recognized. Per pkt., 25 cts.

ROSA MULTIFLORA NANA.

Salvia splendens: Two Splendid New Varieties.

Salvia splendens compacta erecta. Dwarf, erect spikes of dense miniature flowers of a vivid dark scarlet; a novelty of great value, and a very decided improvement in this favorite autumn bloomer. Per pkt., 25 cts.

Salvia splendens grandiflora prostrata. A new large-flowered, bright scarlet variety, with graceful drooping flower-spikes. It is very showy and attractive, and noticeable for its distinct drooping habit. Per pkt., 25 cts.

SWEET PEA, "CUPID."

The First DWARF Sweet Pea Ever Offered.

This remarkable novelty has absolutely no tendency to climb, but branches from the root, and the plant does not grow over 5 inches high nor cover a space of more than 15 inches across. The flower-stems are about 4 inches long and bear each 2 or 3 blossoms, which are of a pure waxy white, of very large size and great substance. It is well adapted for borders and for bedding, the snow white blossoms contrasting most effectively with the pretty dark green foliage. It is a wonderfully free bloomer, beginning to flower as early as May and continuing until November. It will be found very valuable for cutting, each of the flowers on one stem coming into bloom at the same time. It makes a most attractive pot-plant, as will be seen from the illustration, which shows one plant in a 12-inch pot.

It has received the award of merit from the Royal Horticultural Society of England. Regular size pkts. of 20 seeds, 25 cts. each, or 5 pkts. for \$1; per dozen pkts., \$2. Half-size pkts. of 10 seeds, 15 cts. each, 2 pkts. for 25 cts., 10 pkts. for \$1.

Zinnia, "Tom Thumb."

The plants of this dwarf double variety vary in height from 4 to 12 inches, forming compact, free-flowering bushes, with blooms resembling those of the Pompon Zinnia. They are especially suited for edgings, small beds and groups. **White**, per pkt., 10 cts.; **Orange**, per pkt., 10 cts.

Chinese Vegetables.

Many garden vegetables have been introduced into this country by the Chinese. The following are a few of those cultivated by the Chinese gardeners in the vicinity of New York. They are worthy of a place in American gardens:

Pe-Tsai, or Chinese Cabbage. This is the best known and perhaps the most valuable. The plant bears a loose lettuce-like head of crisp leaves, which may be used in all the fashions in which cabbage is served. It does best in a rather cool, moist soil. Per pkt., 10 cts.; per oz., 30 cts.

Chinese Mustard. This is an excellent plant for greens, and produces an enormous amount of herbage, hence it is desirable, whether for home use or for the market-gardener. The leaves have an agreeable flavor when cooked like ordinary spinach. Per oz., 10 cts.; per lb., 75 cts.

Chinese Tuberous-Rooted Mustard. This is grown for its small, turnip-like roots, which are excellent for salads, and will be found useful by the cook. Per oz., 15 cts.; per lb., \$1.25.

Chinese Yam. (*Dioscorea batatas*.) The roots are used like potatoes, being boiled, roasted and cooked in various other ways. Roots, per doz., 75 cts.; per 100, \$4.

Zit-kwa. (*Benincasa cerifera*.) This is the Wax Gourd, well known as an ornamental Gourd. The fruit is round or oblong, with solid white flesh. It is excellent for preserves or sweet pickles, and has been advertised as the Chinese Preserving Melon. It requires the same culture as the muskmelon. Per pkt., 10 cts.; per oz., 60 cts.

La-kwa. (*Momordica charantia*.) For American tastes the Balsam Pear has probably more merit as an ornamental vine than as an esculent. It is a favorite with the Chinese, who use it largely in salads, pickles and curries. In India the fruit is sliced and then dried. It is necessary to boil it in water first, to remove bitterness. Pkt. 5 cts., oz. 25 cts.

Sing-kwa. (*Luffa acutangula*, the Dish-Cloth Gourd.) The fruit is eaten before it is mature, either sliced like cucumbers, in soups, or cooked like squash. In Japan the young fruit is sliced and dried, and thus preserved for future use. Per pkt., 5 cts.; per oz., 30 cts.

New, Rare and Valuable Vegetable Seeds.

Bean, Thorburn Valentine Wax.

First in Earliness, First in Productiveness, and First in Quality.

This is an improved Extra Early Valentine Bean, with round *wax* pods. Originated with T. V. Maxon,

THORBURN VALENTINE WAX BEAN.

formed in addition to those near the central stalk of the plant, which accounts for its wonderful productiveness, amounting, under favorable conditions, to 100 or 150 fold. The pods are meaty and well filled, thick, flat when young, and semi-round later; of rich yellow color, fine quality, and stringless, even when large enough to shell. If the pods are picked as fast as formed, the plant continues to furnish a bountiful supply for an unusually long season. Per pt., 25 cts.; per qt., 40 cts.

Bean, Marvel of Paris.

A splendid early dwarf Snap Bean, very vigorous, and of remarkably great and prolonged productiveness. Pods green, long and slender; tender and of excellent quality. Per pt., 20 cts.; per qt., 35 cts.

Beet, Black Queen.

A splendid half-long blood Beet of the finest table quality, with beautiful dark blood-red foliage, thus combining the useful and the ornamental. Oz., 20 cts.

Melrose Sweet Corn.

A new sort obtained by inter-crossing the best early varieties and selecting for seed the earliest and largest ears. This process was kept up for several years, and the result is a Sweet Corn as early as the Early Cory, with ears twice as large, and producing two to three ears to the stalk. On account of its sweetness, earliness, size of ears and productiveness, this is the best of all for market purposes. Per qt., 25 cts.

Cucumber, Thorburn 1896 Pickler.

This is a strain of the well-known Green Prolific, or Boston Pickling, which has been improved for several years with the view of obtaining all the qualities desired for pickling purposes. In size, symmetry, slimness, color and productiveness, this can now be justly called a perfect pickler. Per oz., 15 cts.; per lb., \$1.50.

Egg-Plant, Improved New York White.

This new variety possesses all the desirable qualities of the well-known New York Purple, but instead of being dark purple it is pure white. It is very striking and handsome in appearance, of large size and regular, oval form; fine quality. Per pkt., 10 cts.; per oz., 50 cts.

the well-known cultivator, of Jefferson Co., N. Y. The type is so perfectly fixed that only one plant with green pods was found in the field, and that was probably from a stray Bean. It grows only about 15 inches high, with a strong stalk and an abundance of foliage. It is without any exception the earliest Wax Bean in use, being even earlier than our Refugee Wax. Beans planted on June 18 produced pods 4 inches long by July 25, and on August 1 half a crop could be picked. The pods are very meaty, and with so very little string that they may justly be called stringless. Certainly no other Bean has less string or less hard shell to the pod as long as they are suitable for cooking. It is the best quality for snap Beans of any Wax Bean in use. It is remarkably free from rust, and remains a long time without becoming tough. Combined with these valuable features of extreme earliness and excellence of quality is its enormous productiveness. In this respect, also, it excels any Wax Bean in cultivation. All who saw the field before harvest pronounced it the fullest podded field they had ever seen. The pods are well held up from the ground. Per qt., 30 cts.

Bean, Keeney Rustless Golden Wax.

Combines hardiness and productiveness with fine quality. A strong-growing bush variety of remarkable vigor and freedom from rust. It sends out short tendrils, on which pods are

EGG-PLANT, IMPROVED NEW YORK WHITE.

Muskmelon, Long Island Beauty.

This superb new variety originated on Long Island. It is of the Hackensack type, but possesses so many advantages over that popular variety that it is no doubt destined to supersede it. The flesh is green, of the very finest quality, and the skin is densely netted. In shape it resembles the Hackensack, but is slightly more ribbed, and is decidedly the most attractive-looking melon we have ever seen. Besides being the finest in quality and the most beautiful in appearance, it is also the earliest of all. Oz., 15c.

MUSKMELON, LONG ISLAND BEAUTY.

Onion, Walker Improved Exhibition.

A light straw-colored variety of very large size and fine shape, being full at the base, with a slightly globular shoulder, which gives it a great depth from top to base. As it grows to an enormous size (specimens measuring 18 inches having been grown), it is the best sort to raise for exhibition purposes, but it is equally valuable for general purposes, being quite mild in flavor and an excellent keeper. Per pkt., 30 cts.

Radish, Round Scarlet China.

A new variety of the China Radish, which may be sown at intervals from spring till autumn. It matures in from six to eight weeks, and is much hardier than other varieties; valuable as a winter Radish as well as for summer. In shape it is round, and in color rich scarlet, with pure white flesh of a most agreeable flavor. Per oz., 15 cts.

THREE NEW PEAS.

"Duke of York." It is impossible to speak too highly of this splendid new wrinkled Pea. It is the most distinct and valuable that has been introduced for years. It has been well described as an earlier and dwarfer form of the "Duke of Albany," possessing all the good qualities of that standard variety, but maturing two or three weeks earlier, and producing an equally large crop on a plant growing only three feet high. It is of robust growth, very large, long and full podded, and of finest flavor. Per pt., 45 cts.; per qt., 85 cts.

"Queen." A most excellent new wrinkled variety of English origin, growing about 2½ feet high, and

bearing an abundance of very large, handsome pods, which are well filled with large, oval, dark green Peas of the finest quality and flavor. It is recommended as one of the very best main crop sorts. Per qt., 30 cts.

Station. An extra-early wrinkled Pea, growing about 2 feet in height. It produces more than twice the number of pods of any extra-early variety of smooth Pea now in use. Not only that, but the pods are of larger size, better filled, and the Peas of better quality than those of any smooth extra-early sort. The crop is ready to pick but a few days later than the very earliest. Per qt., 35 cts.

Tomato, Thorburn New York.

A new and entirely distinct variety, discovered four years ago in a field of the Acme Tomato. After three years of careful culture it has retained uniformly its distinctive features, and we have every reason to consider the type perfectly fixed. As will be seen from our illustration, it differs in form from all other Tomatoes, being hexagon-shaped and unusually deep. In color it is deep red, with a purplish tinge, and altogether it is as handsome as it is unique. In size it averages a little larger than the Acme; the flesh is very solid, and of mild, agreeable flavor. It is **extra early** in ripening, a vigorous grower and a great yielder. It is excellently adapted for canning purposes, and its extremely long-keeping qualities and thick, smooth skin make it a most valuable shipping variety. Per pkt., 10 cts.; 3 pkts. for 25 cts.

Tomato, The Waldorf.

So many fine Tomatoes have been introduced of late that only the possession of decided excellence in a new one could justify our adding to the list. The **Waldorf** is distinct and decidedly valuable. It is of perfect, uniform shape, smooth, large and of fine quality, exceptionally solid, and of a very handsome dark, shining rose color. Medium in ripening, and very productive. Per pkt., 10 cts.; 3 pkts. for 25 cts.

Tomato, The Autocrat.

A new hybrid originated by Mr. Carman. It is very large, of fine, regular shape, very solid, and with few seeds. It ripens about the stem, and is a good producer. The vines are strong and with little foliage. In ripening it is medium early, and in color it resembles the well-known Acme. A good shipper. Per pkt., 10 cts.; per oz., 50 cts.

Tomato, The Democrat.

This is also a cross-bred variety of Mr. Carman's, the female parentage being the same as that of The Autocrat, which it resembles in form, solidity, fewness of seeds and ripening about the stem. It is also of large size and very prolific. In color it is a fine, dark purplish red. It is a vigorous grower, with dark green foliage. Medium early and a good shipper. Per pkt., 10 cts.; 3 pkts. for 25 cts.

TOMATO, THORBURN NEW YORK.

Our Two World-Famous New Potatoes, NOW, FOR THE FIRST TIME, OFFERED AT POPULAR PRICES.

"CARMAN NO. 1."

THE BEST SECOND-EARLY EVER GROWN.

Our price last year was \$16 per barrel, but with this year's enormous crop, we are now able to quote it at a figure that comes within the reach of all. It is already too well known to require any description, but we may repeat that it is not like so many so-called "New" Potatoes, merely an improved stock of some standard sort, but a distinctly new variety, being a seedling from seedlings, raised through several generations. It is second early in ripening, of the most perfect shape, the most desirable size, and with very few and shallow eyes. The flesh is peculiarly white, perfect in quality, and very dry. It is an enormous yielder, the tubers being very handsome and uniformly large. In every point of merit it is universally conceded to be incomparably superior to any second-early in cultivation. Price, $\frac{1}{2}$ pk., 50 cts.; per pk., 75 cts.; per bus., \$2; per bbl., \$4.50.

"CARMAN NO. 3."

THE BEST LATE VARIETY EVER GROWN.

Last year's price was \$25 per barrel, yet the demand was twice as great as our supply, and we had to return thousands of dollars to customers who were late in ordering. We have a very large crop this year, yet we would recommend our customers to order early, and make sure of being supplied; for at the very low price at which we are now offering it, we anticipate an enormous demand, the value of this splendid Potato being so universally known. Like the "Carman No. 1," it is a seedling from seedlings, and it resembles that variety in having few and shallow eyes. Without any approach to an exception it is the *greatest yielder ever introduced!* It may fairly be claimed that it does not yield any small tubers at all. It bears its tubers very close to the plant, a single turn of the fork turning out every Potato. It is of the *largest size* and of the *shapeliest form*, as will be seen from our illustration. It is a perfect keeper; that is, it will not sprout up to planting time, unless kept in a warm place. Both skin and flesh are of extreme whiteness. Eyes few and shallow. Late in ripening.

Our Claims For "Carman No. 3" Are:

- 1st. It is the handsomest large Potato ever produced.
- 2d. It will outyield any other Potato whatever.
- 3d. Practically every Potato is of marketable size.
- 4th. Its table qualities are fully up to the highest standard; it has no hollow hearts, and no hard or dark parts.

We are confident that it will soon be the most popular variety for field culture, on account of its enormous productiveness and great beauty. Price, 1 lb., by mail, prepaid, 25 cts.; $\frac{1}{2}$ pk., 65 cts.; per pk., \$1; per bus., \$3.50; per bbl., \$7.50.

N. B.—The Carman No. 1 and No. 3, being respectively intermediate and late sorts, we may mention that for first crop, **THE THORBURN** can be positively recommended as the very best extra early sort grown, being very productive, of good size and form, and of unexcelled table quality. We sell much more of it than of all other sorts combined. $\frac{1}{2}$ pk., 40 cts.; per pk., 60 cts.; per bus., \$1.75; per bbl., \$3.25.

VEGETABLE SEEDS.

Please notice that our prices are quoted at the lowest New York figures, and do not include the prepayment of express or postage charges. If postage is to be prepaid, add 8 cents per pound.

See inside front cover of this catalogue for complete assortment of Vegetable Seeds of approved and choice sorts for from \$5 to \$25.

ASPARAGUS.

ASPERGE. *Esparrago.* Spargel.

CULTURE.—Sow the seed thinly in rows one foot apart in April or May (4 to 5 lbs. to the acre), and keep down all weeds. To secure strong, healthy plants, thin out the seedlings to three or four inches in the rows, saving only the strongest. The one-year-old plants should be set out in spring, in a rich, sandy loam, dug eighteen inches deep, into which has been worked plenty of well-rotted manure. If a stiff clay soil is all that can be had, add plenty of sand and sifted coal-ashes to loosen it up, and also see that it is well underdrained. In planting for private use, set out in beds five feet wide, three rows in a bed, the outer being each one foot from the edge, and allow twelve inches in the rows; set the plants at least six inches below the surface. If set out in autumn, top-dress with six inches of manure. For market on a large scale, set out 4 by 1½ feet.

Every fall a good dressing of coarse manure should be applied after the tops have been cut, and in the spring forked in. Never cut too closely. The roots need the benefit of some foliage during the year, else they will weaken and die.

ASPARAGUS.

| | Two-year-old roots | | | |

ARTICHOKE.

ARTICHAUT. *Alcachofa.* Artischoke.

CULTURE.—Deep, rich, sandy loam, with plenty of well-rotted manure. Sow seeds in April and May, and when large enough transplant into rows three to four feet apart and two feet in the rows. They reach maturity the second year. Cover with litter when cold weather commences, first tying up the leaves so that they will occupy less space, and in spring fork in a dressing of manure. It is an excellent vegetable, and easily grown, thriving in any situation, provided the heads are cut off and used as they get ready. If left to ripen on the plant they will exhaust it, and no more will be produced that season. Heads are unfit for culinary purposes after the flowers expand. These excellent varieties are by no means so largely grown as they deserve to be.

TYPE OF WAX BUSH BEAN.

THORBURN PROLIFIC MARKET BEAN.

BEANS.

As a farinaceous food for man, the Bean is considered far superior to any other legume, and next in importance to wheat. The modern varieties leave little to be desired; the great care given to their improvement has resulted in many superior sorts, greatly extending the season of use, as well as varying the quality or flavor. The rearing of a really dwarf form of the Lima Bean is one of the greatest recent advances.

DWARF, or SNAP BEANS.

HARICOTS NAINS. *Frijoles.* Krup-Bohnen.

CULTURE.—About the first of May select a warm, dry sheltered spot; dig and manure slightly; make drills two inches deep and eighteen inches to two feet apart; drop the Beans three inches apart in the drills, and cover not more than two inches deep. Hoe well in dry weather to keep down the weeds. Sow every two weeks for a succession.

Per qt. ½pk. Per pk. Per bus.

30	Thorburn Prolific Market Bean. An exceedingly vigorous and healthy grower and enormously productive, the pods being borne in thick clusters, and as many as 35 to 40 on each plant. The pods are of a light green color, long and perfectly round, solid-fleshed, and of very soft marrow and texture. For productiveness, solidity of flesh and roundness of pod, it excels any now in cultivation	\$0 25	\$0 85	\$1 50	\$5 00
31	Nettle-Leaved Bagnolet. Straight, long, green pods; very productive . . .	30	1 00	1 75	6 00
32	Marvel of Paris. Long, slender pods; early and of remarkably great and prolonged productiveness pint, 20 cts.	35	1 25	2 00	7 00
34	Triumph of the Frames. A dwarf green-seeded variety, which by its extreme earliness and small size is the best of all for growing in frames . .	30	1 00	1 75	6 50
36	Ne Plus Ultra. An extra-early sort; green, full flat pods; exceedingly productive; also suitable for forcing	25	75	1 25	4 50
38	Best of All. Early and superior; round, green, fleshy pods	25	75	1 25	4 50
40	Boston Favorite (Large Goddard). Red-podded Dwarf Horticultural . . .	25	75	1 25	4 50
44	Extra-Early Valentine. Early strain of this popular round-pod Bean . . .	25	75	1 25	4 00
46	Early Mohawk. Long, flat and straight pods; very hardy	25	75	1 25	4 00
48	Early China. Early, and continues long in bearing	25	75	1 25	4 00
49	Pride of Newtown. Light green, flat pods; very early and productive . .	25	75	1 25	4 00
52	Round Early Yellow Six-Weeks. Resembles the "Mohawk," save in color; flat pods; a popular variety	25	75	1 25	4 00
54	Long Yellow Six-Weeks. Early; the leading market sort; full, flat green pods; good quality	25	75	1 25	4 00
56	Dwarf Horticultural. Late and productive	25	75	1 25	4 25
61	Dwarf Lyonnaise. A fine new sort, with very long, roundish, slender pods. .	30	85	1 50	5 00
62	Refugee, Thorburn Extra Early. Has all the superior qualities of the famous Refugee, and is fully two weeks earlier in podding	25	75	1 25	4 00
64	" Late, or 1,000-to-1. Medium to late; very productive and tender; largely grown for main crop; round pod	25	75	1 25	4 00
65	" Golden. Has round pods of light color; of strong growth, and very productive	25	75	1 25	4 25
66	" Galega. An improved large Refugee	25	75	1 25	4 25

DWARF WAX BEANS.

		Per qt.	½pk.	Per pk.	Per bus.
68	Thorburn Valentine Wax. First in earliness, first in productiveness, and first in quality. A perfect Valentine bean, with <i>wax</i> pods	\$0 30	\$1 00	\$1 75	\$6 00
70	Black Wax, Improved Prolific. Very early and prolific. The pods are round, full, stringless, and of fine quality	25	75	1 25	4 25
71	" " Challenge. An extra early strain of the dwarf Black Wax	30	85	1 50	5 00
73	" " Bismarck. Resembling in growth Wardwell Kidney Wax	25	75	1 25	4 25
74	" " Currie's Rust-Proof. Flat pods; very early and productive.	25	75	1 25	4 50
75	" " Fuller's. Larger pods than the common Black Wax	30	1 00	1 75	6 50
76	Black-Eyed Wax. A cross between Golden and Black Wax; very early and very productive; yellow pods	30	85	1 50	5 50
77	Detroit Wax. Very much like Golden Wax, but less liable to rust	25	75	1 25	4 25
78	Flageolet Red Wax. Flat, yellow, stringless pods of great length and breadth; exceedingly productive	30	85	1 50	5 00
79	Keeney Rustless Golden Wax. (For description, see Novelties)	40	1 50	2 75	10 00
80	Improved Golden Wax. Very early; round golden pods	25	75	1 25	4 25
81	Golden-Eyed Wax. Very hardy and prolific, with flat yellow pods; very early and exceptionally free from rust; a very desirable and popular sort	25	75	1 25	4 25
82	Pink-Eyed Wax. Pods longer and rounder than the Golden Wax	30	85	1 50	5 00
85	Thorburn Refugee Wax. A perfect Refugee, with long, round, yellow, wax pods. Suitable for early or late sowing, and an immense yielder	30	85	1 50	5 00
86	Wardwell Kidney Wax. Extra early; purely wax pods, long, flat	30	85	1 50	5 00
87	Saddle-Back Wax. Large, long, round, stringless pods; fine quality	30	1 00	1 75	6 50
88	White Wax. Flat, yellow pods	30	85	1 50	5 50
90	Yosemite Mammoth Wax. The largest pods of all the wax sorts; very productive and of good quality	35	1 25	2 25	8 00

WHITE BEANS.

91	Thorburn Dwarf Lima (Kumerle Strain). A dwarf form of our famous Challenger Lima—the finest of all Limas. It possesses the flavor of the genuine Challenger Lima, thus differing from all other Bush Limas. It is exceedingly productive, bearing from 50 to 60 pods on the bush	40	1 40	2 50	9 00
92	Burpee Bush Lima. A well-established bush form of the large Pole Lima, like which the beans are large and flat. It is very productive	40	1 40	2 50	9 00
93	Henderson Bush Lima, or Sieva. Productive	35	1 25	2 00	7 00
94	White Valentine. Round pod	25	75	1 25	4 50
95	Emperor William. Very long pod. Earliest white Bean for forcing	25	85	1 50	5 00
96	Extra-Early Maine. A small white kidney-shaped variety; valuable as a string, baking or soup Bean; very early	25	75	1 25	4 50
97	Mexican Tree Bean. A very productive white sort, of upright growth	25	75	1 25	4 00
98	White French Flageolet. Used as a shell Bean in the green state; fine	25	75	1 25	4 50
99	White Kidney. Excellent, either green or ripe	20	60	1 00	3 50
100	White Marrow. Good either as a string or shell Bean	20	60	1 00	3 50

ENGLISH DWARF BEANS.

FEVE DE MARAIS. *Haba.* Große Bohnen.

CULTURE.—Sow in drills two feet apart, as early in the spring as the ground can be worked (these are as hardy as peas), in order to get them into pod before the heat of summer. When in pod, break off the top of the plant to check the growth. Plant and hoe same as for Dwarf Beans. A strong soil suits them best. These Beans are eaten shelled.

		Per qt.	½pk.	Pk.	Per bus.
106	Early Mazagan. The earliest of this class	\$0 25	\$0 75	\$1 25	\$4 50
108	Broad Windsor. The largest and best of the class of English Dwarf Beans	30	90	1 50	5 00
109	Sword Long-Pod. A size smaller than Windsor	25	75	1 25	4 50
110	Green Windsor. A green "Long-Pod"	25	75	1 25	4 50
112	Small Horse Bean. Half the size of Mazagan	25	75	1 25	4 50

THORBURN REFUGEE WAX BEAN.

THORBURN DWARF LIMA BEAN.

COPYRIGHTED 1899
BY J. M. THORBURN & CO.

POLE, or RUNNING BEANS.

HARICOTS A RAMES. *Frijole de Bejuco.* Stangen-Bohnen.

CULTURE.—Sow as the soil becomes warm and dry, from the first part of May (for all except Limas) to the latter part of May, in hills four feet apart each way. Limas should not be planted until warm weather has fairly set in. One quart of Limas will plant about 100 hills, allowing four or five Beans to a hill, and of the smaller sorts about 200 hills. Poles eight or ten feet long should be firmly set in the center of the hills before putting in the seed.

LIMA BEAN.

		Per qt.	½pk.	Per pk.	Bus.
114	Lima, Challenger. Thick and productive; the best of all	\$0 35	\$1 25	\$2 00	\$7 00
115	Large White. Largely grown and highly esteemed	35	1 25	2 00	7 00
116	Thorburn Many-in-a-Pod. A pedigree Bean with very large pods, containing more Beans than any other sort. Of finest quality	40	1 40	2 25	8 00
118	Ford Mammoth. Beans of enormous size. Very productive	35	1 25	2 00	7 50
120	King of the Garden. Large in pod and Bean; productive	35	1 25	2 00	7 00
124	Dreer. Thick and of fine quality	35	1 25	2 00	7 00
126	Early Jersey. A few days earlier in maturing than the large Lima	35	1 25	2 00	7 00
127	Speckled. Large	50			
128	Horticultural. A cross between the Horticultural and Dreer Lima	30	1 00	1 75	6 00
130	Small White, or Sieva. Small, but of very good quality	35	1 25	2 00	7 00

156	White Algerian Wax. Yellow stringless pods	40			
162	Black German Wax. Yellow pods	30	1 00	1 75	6 50
165	Flageolet Wax Pole. Large yellow, stringless pods	30	1 00	1 75	6 50
173	Mont d'Or, or Golden Cluster. Early, productive; golden wax pods	30	1 00	1 75	6 50
179	French Yard-Long. Pods sometimes grow from two to three feet long; very curious; should be grown on pea-brush per gill, 25 cts.				1 00

BORAGE.

The young leaves of this annual, which smell somewhat like a Cucumber, are used as a salad, or boiled like Spinach. Should be sown at intervals, as the leaves are palatable *only when young*. Sow in the spring, in light soil; transplant in shallow drills, a foot apart, when of six weeks' growth.

183	Borage	\$0 20	\$0 40	\$1 50
-----	-------------------------	--------	--------	--------

BURNET.

PIMPERNELLA PETITE. *Pimpinella.* Pimpernell.

The leaves have a warm, piquant taste, and are useful for salads and soups. Sow early in spring, half an inch deep, thinly in rows.

191	Garden	\$0 10	\$0 25	\$0 75
-----	-------------------------	--------	--------	--------

BEET.

BETTERAVE. *Remolacha.* *Salatrübe.*

CULTURE.—Sow as early in the spring as the ground can be worked (5 to 6 lbs. to the acre), and every two weeks after for a succession, up to the first week of July. For general crop, sow about the middle of May. The soil should be light, sandy loam, well enriched with stable-manure, and plowed and harrowed until very fine. Sow in drills one foot to fifteen inches apart, and when well up, thin from four to six inches. The young Beets pulled out of the rows are excellent used as Spinach.

VARIOUS BEETS.

		Per oz.	¼ lb.	Per lb.
192	Extra-Early Egyptian. Very early, and of dark blood color; rather flat in shape	\$0 10	\$0 20	\$0 60
193	Extra-Early Eclipse. Very early; round-rooted and dark red	10	20	60
194	Lentz Extra-Early Turnip. A large, small-top, round Beet; fine strain	10	25	75
195	Dewing Early. Of fine form and flavor, and good for market	10	20	60
196	Bastian. A very early light-colored turnip Beet	10	20	60
197	Columbia. A round, smooth-skinned variety, with deep blood-red flesh; it is very early, and of the finest quality	10	25	85
200	Extra-Early Turin. A dwarf growing round Beet; deep blood color; tender, and very early	10	25	75
213	Edmand Blood Turnip. A market-gardeners' strain of great regularity in shape; deep blood skin, and very dark flesh of best quality	10	20	55
214	Early Blood Turnip. Dark red, and of fine flavor; productive	10	20	50
215	Bassano. Early, flat, light color	10	20	60
220	Early Yellow Turnip. Flesh yellow and tender	10	25	75
224	Half-Long Blood. Fine dark strain	10	25	85
226	Black Queen. Very dark, half-long root, leaves almost pure black	20	40	1 25
228	Ne Plus Ultra. Very dark, half-long; foliage dark	15	30	1 00
230	Victoria. Metallic red	15	35	1 25
232	Dell. Black-leaved	15	35	1 25
234	Long Smooth Blood. A good late variety	10	20	60

FOLIAGE BEETS.

Kinds of which the leaves only are used; very ornamental.

252	Scarlet-Veined Brazilian. . . .	20	35	1 25
253	Dracæna-Leaved	20	40	1 50

These are grown exclusively for their handsome foliage.

BEETS, MANGEL-WURZEL, SUGAR, ETC.

Runkelrüben.

CULTURE.—As all Mangels require a deep soil in order to grow well, plow and subsoil at least a foot to eighteen inches, and apply plenty of rich stable or Thorburn's Complete Manure. Sow in May or June (4 to 5 lbs. to the acre), in rows eighteen inches to two feet apart, and thin to eight inches in the rows. Young plants may be transplanted to fill up vacancies. Sow in addition, when the plants are three to four inches high, at the rate of 200 lbs. Complete Manure, 200 lbs. bone flour, and 400 lbs. salt, per acre. As soon as frost occurs, dig the crop. But in order to be well preserved for gradual consumption during the winter, Mangel-Wurzels should be heaped to a height of

ORNAMENTAL-LEAVED BEET.

BEETS—MANGEL-WURZEL, SUGAR, ETC.—continued.

perhaps six feet, on a dry, sloping situation; cover at first with a piece of canvas, and as the cold increases this should be replaced by about six inches of either salt-hay, straw, sea-weed, or even corn-stalks. Lest this covering be displaced by the wind, a light layer of earth is necessary. As soon as this surface soil becomes frozen, about six or eight inches more of earth should be placed over the entire heap. By following up this gradual process of covering, all danger of heating will be obviated, and the roots will keep in perfect order. Sow from four to five pounds to the acre.

MAMMOTH LONG RED MANGEL.

Prices for large quantities on application.

		Per oz.	¼lb.	Per lb.
262	Mammoth Long Red Mangel-Wurzel. Very large, selected strain; 100lbs. and over, @ 25 cts. per lb.	\$0 10	\$0 15	\$0 30
263	Long Yellow Mangel-Wurzel. A good main crop sort	10	15	40
266	Yellow Ovoid Mangel-Wurzel. Of distinct shape; one of the most productive sorts.	10	15	30
268	Giant Yellow Intermediate. A very large yellow sort.	10	15	40
270	Golden Tankard Mangel-Wurzel. Bright yellow; handsome and sweet, and very productive	10	15	40
274	Red Globe Mangel-Wurzel. Similar to the Yellow Globe; productive.	10	15	35
276	Yellow Globe Mangel-Wurzel. Large and productive; keeps well	10	15	40
278	Orange Globe Mangel-Wurzel. Similar to the above, but of a deeper, richer color	10	15	40
286	Lane's Sugar. For sugar-making or stock-feeding	10	15	35
290	White Sugar Beet. Grows to a large size, and is useful for making sugar, as well as for stock-feeding	10	15	30
293	Vilmorin Improved Sugar. A much improved strain of the preceding; very valuable as a sugar-producing Beet . . .	10	15	35

BROCCOLI.

BROCCOLI. *Brocoli.* Spargelfohh.

CULTURE.—Sow early sorts as soon as the ground can be worked in the spring, in shallow drills, drawn three or four inches apart. Plant out two feet apart each way when the plants are about four inches high. Cultivate the same as cabbage, in rich soil. Use the same remedies for insect attacks as are recommended or cabbage.

The following are sorts best adapted to this climate, and the only ones which succeed generally; they are excellent, and deserve much wider culture than is usual in this country. We recommend No. 307 as the most certain to give satisfactory results.

	Per oz.	¼lb.	Per lb.
300	Early White	\$0 25	\$0 75

315	Sulphur-Colored	25	75
316	Chapel Cream	25	75

BROCCOLI.

BRUSSELS SPROUTS.

CHOU DE BRUXELLES. *Berza de Brusels.* Rosenkohl.

CULTURE.—Sow in May, in the same manner as Cauliflower, and transplant in July, one foot apart in the rows, which should be one and one-half feet apart. In gardens, both large and small, Brussels Sprouts are, without exception, the very best winter vegetable that can be grown. Not the least valuable point connected with the Brussels Sprouts is that it is as hardy as the common Curled Greens. The common Cabbage is hardy enough in a young state, but when full grown and hearted, frost soon destroys the largest heads, which rot and fall to pieces. Not so the Brussels Sprouts; being small and hard, it is not in the least affected by frost. The real Sprout is not much larger than a marble, and as firm and hard almost as the stalk itself. These are the sorts which cooks prefer. They strip off the outer covering, cook them whole, and serve them up artistically in that fashion. When cooked through and no more, such Sprouts melt in the mouth, like the tenderest Cauliflower, and are equally as good. If more widely known, the Brussels Sprouts would be as popular as they are valuable; few people appreciate them at their full worth.

BRUSSELS SPROUTS.

318 Best French, or Roseberry. Very good	\$0 20	\$0 60	\$2 00
319 Improved Half-Dwarf. The very best and surest strain	20	60	2 00
320 Improved Dwarf. Compact heads of fine quality			
	Per oz.	¼ lb.	Per lb.
	\$0 20	\$0 60	\$2 00

CARROT.

CAROTTE. *Zanahoria.* Möhre.

CULTURE.—Sow No. 321 as early as the ground can be worked; or, for late crop, until the latter part of July. For main crop, sow from the middle of May to the first of July. Thin out early crop to five inches in row, main crop six to seven inches; the rows ten inches apart for early crop, fourteen for main crop. Hoe often and deeply between the rows. Soil, light, sandy loam, richly manured and deeply dug. Sow at the rate of two pounds to the acre.

DANVERS CARROT.

	Per oz.	¼ lb.	Per lb.
320a Early Round Parisian. Small and very tender; for frames or open ground	\$0 15	\$0 30	\$1 00
321 Early Forcing. Tender and fine; best for early and late crops and frames	15	30	1 00
322 Bellot. Very early and tender French sort; valuable for forcing or outdoor	15	30	1 00
323 Half-Short Stump-Rooted, Guerande Strain. Very thick and short	10	25	75
324 Early Scarlet Horn. Very thick roots	10	25	75
326 Half-Long Pointed. A very well-known strain; productive, early, and a valuable standard sort for home or market gardens	10	25	75
330 Half-Long Stump-Rooted. An excellent sort, of good quality	10	25	75
332 Half-Long Stump-Rooted, Nantes Strain. A popular market sort	10	25	75
334 Half-Long Stump-Rooted, Chantenay Strain. Style of Nantes; broader shoulder.	10	25	75
338 Half-Long Stump-Rooted, Carentan. Coreless; flesh red, of fine quality	10	25	75
340 Half-Long Stump-Rooted, Luc. Useful main crop sort; early and productive	10	25	75
342 Half-Long Danvers. Thick; of good quality and exceedingly productive	10	25	75
344 Long Orange. Best for stock-feeding	10	25	75
345 St. Valery. Long red; for feeding stock	10	25	75
346 Altringham. Long scarlet; productive	10	20	60
348 Long White. Very large; for stock	10	20	50

CABBAGE.

CHOU. *Berza de repollo* Kohl.

CULTURE.—Soil for Cabbage should be rich and heavy loam, with good drainage. On such a soil, with an abundance of stable or Thorburn's Complete Manure, excellent crops are sure to be grown.

EARLY JERSEY WAKEFIELD.

For early spring, sow in fall; not too early, or the plants are liable to bolt in the spring instead of heading. In a month the plants will be fit to transplant to coldframes, where they are wintered, taking care, in planting, to set the young plants down to the first leaves. Transplant in spring as soon as the ground can be worked, setting the plants two feet apart one way and from twelve to eighteen inches the other, according to the variety. If it is desirable to economize space, Lettuce or Radish may be sown between the rows, as they will be out of the way before the Cabbage needs the room. For late or winter crops the seed is sown in May, and the plants set out in July. In this case they are set in rows two by three feet, so as to work them with a horse and cultivator. To destroy the green worm that is so

destructive to the leaves and heads of Cabbage and Cauliflower, an experienced grower says: "Take one ounce of saltpetre and dissolve it in twelve quarts of water; then take a short-handled whisk broom, dip it in the solution, and sprinkle the plants well. One application is sufficient, unless the stuff is washed off by heavy rains. The liquid, being perfectly clear, never colors the Cauliflower or Cabbage heads." To prevent the turnip flea attacking the young plants, sift fine air-slaked lime or tobacco dust over them as soon as they appear above the ground.

	Per oz.	¼lb.	Per lb.
352 Express. The earliest of all; small solid heads; fine quality	\$0 20	\$0 50	\$1 50
353 Etampes. A fine extra-early small French sort, with pointed heads	20	50	1 50
354 Early York. The standard English sort	15	40	1 25
358 Early Jersey Wakefield. Well known, and most valuable for early	30	85	3 00
360 Early Winnigstadt. A standard second-early variety	15	40	1 25
361 Red Winnigstadt. In size and solidity it resembles the White Winnigstadt. The heads are a fine, deep red color and very tender per pkt., 10 cts. .			
362 Early Dwarf Savoy. The earliest Savoy variety; distinct and good	20	50	1 50
363 Early Vienna Savoy. Very small; delicate flavor	20	50	1 50
364 Early Ulm Savoy. Small, round, deep green heads; very early	20	50	1 50
368 Stein Early Flat Dutch. A remarkably fine strain; a sure header, the heads weighing from ten to twelve pounds. Most valuable for forcing	30	85	3 00
370 Improved Early Summer. A superior second-early sort; produces large and solid heads of fine quality	25	75	2 50
372 Selected All-Seasons. One of the finest for second-early or late, growing to a large size quickly and surely. The true <i>sure-header</i>	25	75	2 50
373 Henderson Succession. An excellent second-early or late sort, on the style of All-Seasons	30	85	3 00
374 Filder-Kraut, or Pomeranian Pointed Head	20	60	2 00
376 Fottler Brunswick. Good solid heads, either for second-early or late	25	75	2 50
378 Large Late Drumhead. A standard winter Cabbage for main crop	25	75	2 50
380 Large Late Flat Dutch. Also a valuable main-crop sort for market	25	75	2 50
382 Vandergaw Quick-Growing Flat Dutch. A sure-heading sort	30	85	3 00
384 Thorburn Market-Gardener's Private Stock Flat Dutch. Fine strain of the immense winter Cabbage grown on Long Island for market	30	85	3 00
386 Large Luxembourg. Solid head, oval shape, outer leaves tinged red, stem remarkably short; very sweet and tender	25	75	2 50
387 Thorburn New Stock Drumhead Savoy. Very fine strain	30	85	3 00
388 Green-Glazed. Glossy green; suitable for hot climates	20	60	2 00
392 Thorburn Improved Red Stone-Head. Very large, solid, red heads; the finest strain of red Cabbage	30	85	3 00
394 Chinese Cabbage (Pe-Tsai)	30	85	3 00

CARDOON.

CARDOON. *Cardo.* Cardon.

CULTURE.—Sow early in spring, in rows where they are to stand, and thin them to one foot apart. When full size, bind the plants together with straw or matting, and earth up like Celery to blanch. The stems of the leaves are used for salads, soups and stews.

480 **Large Solid.** Grows about four feet high; leaves nearly free from spines . . . per pkt., 10 cts. . \$0 40

CAULIFLOWER.

CHOU-FLEUR. *Coliflor.* Blumenkohl.

CULTURE.—The same as for Cabbage, except that extra manure and plenty of water will pay upon Cauliflower. If the soil be dry, water frequently, and if the plants could have a heavy mulch of hay or straw, it would keep the soil moist, and the plants would not suffer from drought. The early kinds should be strong enough to plant out not later than the middle of April; the late kinds may be planted out same time as for Cabbage. To destroy the Cauliflower-maggot, it is recommended, to take one ounce of sulphuret of potassium and dissolve it in one gallon of water. Heat the liquid to about 100 degrees, take a large spoon, or something that will hold the tooth part of a gallon, and pour the liquid against the stalk of the plant just above the ground.

Per oz. $\frac{1}{4}$ lb. Per lb.
482 **Extra-Early Dwarf Erfurt.** Short stem; very fine. Pkt., 50 cts. . \$6 00

483 **Thorburn Early Snowball.** One of the best for forcing or open ground; small, but a sure header
... per pkt., 25 cts. . 2 25 \$7 50 \$30 00

484 **Thorburn Gilt-Edge.** Large, heavy sort; undoubtedly the best and surest of all the sorts now in cultivation . per pkt., 25 cts. . \$2 25 \$7 50 \$30 00
485 **Large Early Dwarf Erfurt** Finest strain per pkt., 25 cts. . 2 25 7 50 30 00
486 **Denmark.** On the style of Large Erfurt per pkt., 10 cts. . 1 50 5 00 20 00
489 **Extra-Early Paris.** Heads of medium size; first-class per pkt., 10 cts. . 60 2 25 8 00
490 **Italian Taranto.** On the style of Autumn Giant; very solid 40 1 00 4 00
492 **Lenormand Short-Stem.** Has very large heads; white and firm . per pkt., 10 cts. . 60 2 25 8 00
494 **Large Algiers.** Market-gardeners' popular late sort, of enormous size " 10 cts. . 60 2 25 8 00
497 **Early London.** Large and hardy 40 1 00 4 00
499 **Thorburn Nonpareil.** For late planting per pkt., 10 cts. . 60 2 25 8 00
500 **Half-Early Large French.** Intermediate in maturing 40 1 25 5 00
501 **Stadtholder.** Intermediate in season; large and hardy 40 1 00 4 00
502 **Walcheren.** Very late and hardy 40 1 00 4 00

503 **Autumn Giant.** Vigorous in growth, and very large; late 40 1 00 4 00

504 **Ne Plus Ultra, or Giant of Naples.** A large Italian variety 40 1 00 4 00

THORBURN GILT-EDGE CAULIFLOWER.

CAUDOUN.

THORBURN NEW STOCK DRUMHEAD SAVOY CABBAGE.

CELERY.

CELERI. *Apio.* Cellerie.

CULTURE.—Sow the seed in a light, rich, dry border, as early as the ground can be worked, in drills eight

or ten inches apart, and cover the seeds about a quarter of an inch deep, rolling or treading them in if the ground be dry. When fairly out of the seed-leaf, they may be transplanted to another bed, or they may be thinned out to six or eight inches apart, and let grow until wanted to plant out in beds or trenches. The beds should be kept well weeded, and an occasional soaking with water in dry weather will do the plants good. Early in July at the north, a month or six weeks later in the southern states, is the proper time to set the plants out in beds or trenches. Press the soil firmly against the roots. In the garden the better way is to set the plants in shallow trenches—we say shallow, for it is obviously a bad plan to remove all the good soil (as must be done in a deep trench) and put the plants in that which is poor. The plants may be set in a single row in a narrow trench, or the trench may be made into a bed wide enough to hold two, three or four rows, and in this case the plants are in a compact form to be covered for the winter where they grow. This will save much labor where there is no root-cellar for storage, as often happens to be the case. When grown in beds in this way, the rows should be one foot apart, and the plants

about eight inches apart in the rows. A bed four feet wide will take four rows of plants, leaving six inches space on the outside of the first and last rows. The bed should be made very rich with thoroughly decomposed manure. The plants will need to be earthed up two or three times; and in doing this, care should be taken not to let the earth get into the heart of the plant. In field culture the plants are set on the surface in rows four feet apart when the Celery is to be earthed up in the field for early use, and two feet apart when the plants are to be taken up and blanched in the cellar for winter use. The plants are set six inches apart in rows. If not grown in beds, the best way to store is to dig trenches in a well-drained spot in the open ground, one foot wide, and of a depth a few inches less than the height of the Celery. The plants are then lifted and set close together until the whole quantity is stored. The edges of the trench should be made sloping from the tops of the plants. When severe cold weather comes on, cover gradually with leaves, hay or straw, and place boards on top. In such a trench the stalks will blanch perfectly, and may be taken out any time during winter for use or sale as required. The turnip-rooted, or "Knob" Celery, needs no earthing up, and may be planted in rows one foot apart.

	Per oz.	¼lb.	Per lb.
514 Improved White Plume. Naturally white or light foliage; requires but little banking up to blanch; very early, and extensively grown for market	\$0 30	\$0 85	\$3 00
516 Golden Self-Blanching. A grand solid variety, on the style of the White Plume, except that it is golden yellow where the Plume is white	40	1 25	4 50
518 Perfection Heartwell. The finest and largest of the winter varieties, either for the family or market-garden. The heart is golden yellow, and it is of superior quality	30	85	3 00
520 The Schumacher. Immense size; solid and crisp; firm golden yellow heart; a fine keeper	30	1 00	3 50
522 Giant Pascal. An easily blanched and fine-keeping large sort, of excellent flavor; superior for late use	20	60	2 00
523 Large-Ribbed Kalamazoo. A good half-dwarf white solid Celery	Per oz. \$0 20	¼lb. \$0 50	Per lb. \$1 50
528 Boston Market. Rather dwarf; has no particular merit	25	75	2 50
534 Crawford Half-Dwarf. Of vigorous growth and excellent flavor	25	75	2 50
540 Sandringham Dwarf White. Small, white, solid	20	50	1 50
541 Pink Plume. This new variety is described as being the same as White Plume, except that the stalks are tinged with pink	30	1 00	3 50
542 Covent Garden Rose. Of good flavor, as the pink varieties generally are	30	85	3 00
543 Cooper Improved Cutting. The leaves are used as greens for flavoring soups	20	50	1 50
546 CELERIAC, or Turnip-Rooted. Has edible roots, used for soups and stews	20	50	1 50
548 Celeriac, Thorburn Giant. The best of the class; very large roots, used for soups and stews	30	85	3 00
550 Celeriac, Apple. Has small foliage and small smooth roots, for soups	20	50	1 50

THORBURN GIANT CELERIAC.

CHERVIL.

CERFEUIL. *Perifollo.* Benfenlauch.

CULTURE.—Cultivate and use the curled variety of Chervil like Parsley. Sow at any time in the spring, in shallow drills, one foot apart, in well-prepared ground. The seed of the Tuberous Chervil should be sown in August or September, and treated like the Carrot.

- 552 **Curled.** The leaves of this are Per oz. ¼lb. Per lb.
used for flavoring soups and
stews, and for garnishing,
same as Parsley. \$0 10 \$0 25 \$0 75
- 553 **Tuberous.** A variety which has
edible roots. 20 60 2 00

CURLED CHERVIL.

CHICORY.

- 555 **Common or Wild.** Used in *Barbe de Capucin*, a salad much made in France. Sown in June, the roots are transplanted in autumn into sand in a cellar.

- 556 **Witloof.** Sow in June; plant the roots one inch apart, from October to the closing of the ground, in rows eight inches apart, in a trench one foot deep; cut off the

leaves. Cover the roots with well-sifted soil eight inches thick, and the whole with a good layer of dung two or three feet thick. The Witloof will be produced three weeks later in the intermediate cover of soil. Excellent as a salad, as well as a vegetable.

- 557 **Large-Rooted Magdeburg.**
Roots are the Chicory of commerce.

Per oz. ¼lb. Per lb.
\$0 15 \$0 30 \$1 00

15 30 1 00

10 25 75

COLLARDS.

CHOU CABU. *Cabu.* Blatterfohl.

CULTURE.—Sow seed, as for Cabbage, in June, July and August, for succession. Transplant when one month old, in rows a foot apart each way, and hoe often.

- 559 **Georgia** Per oz. ¼lb. Per lb.
\$0 10 \$0 25 \$0 75

CORN-SALAD, or FETTICUS.

MACHE. *Macha o Valerianilla.* Stedßalat.

CULTURE.—Sow during August, or early in September, in drills a quarter of an inch deep and six inches apart. If the weather is dry when the seed is sown, tread it in lightly to insure germination. Keep down weeds with hoe. Just before the winter, cover thinly with straw or leaves.

- 561 **Large-Seeded.** Per oz. ¼lb. Per lb.
\$0 10 \$0 20 \$0 60
- 562 **Small-Seeded** 10 20 60
- 564 **Green Cabbaging** 10 25 75
- 565 **Lettuce-Leaved.** 10 25 75

CRESS.

CRESSON. *Berro o Mastuerzo.* Kresse.

CULTURE.—Sow Nos. 569 and 571 thickly, in shallow drills, every two or three weeks. No. 569 should be cut often, and it will continue to grow. It is useful not only for salad, but for the breakfast table and for garnishing. Nos. 575 and 578 should be sown in damp soil; or if a stream of water can be utilized, they would be much finer. They will also thrive well in damp hotbeds. Rightly managed, their culture is very profitable. To obtain early salad, it is a good plan to sow with water-cress seed a strip four inches wide on the outer margin of a hotbed, inside the frame, where it is always cool.

- 569 **Curled or Pepper Grass.** Per oz. ¼lb. Per lb.
\$0 10 \$0 15 \$0 40
- 571 **Broad-Leaved** 10 15 40

WATER-CRESS.

COPYRIGHTED BY
J.M. THORNBURN & CO
1888.

CORN, SWEET or SUGAR.

MAIS. *Maiz.* *Maiz.*

CULTURE.—Plant in hills three feet apart each way, and five or six kernels in a hill. Hoe often and draw soil up to the stems; break off side shoots. Make the ground rich with well-rotted manure. Sown in drills, a greater yield from a given surface will be obtained. The best fertilizer is Thorburn's Complete Manure. By sowing successive lots and properly selecting varieties, the supply of Sweet Corn can be kept up until hard frosts kill the plants.

EXTRA EARLY.

579	Thorburn Manhattan. The earliest Sweet Corn grown—being ready for the table in six weeks from the time of planting. It is a delicious Sweet Corn, although not wrinkled. The ears are very small, averaging only 3½ to 5 inches in length. The type is yellow, but it occasionally shows white and yellow on the same ear	Per ear	Per qt.	Per ½ pk.	Per pk.	Per bus.
		\$0 25	\$0 85	\$1 50	\$5 00	
580	Early Cory. A very early variety, with good-sized ears and large grains. This is excellent for market, and has attained wide popularity	Per ear	Per qt.	Per ½ pk.	Per pk.	Per bus.
		\$0 05	20	60	1 00	3 50
581	White Cory. Resembles the ordinary Cory in size and earliness, but with white cobs	5	20	60	1 00	3 50
582	Marblehead. One of the earliest; dwarf, with short, thick ears; of good quality for an early sort, which especially commends it	5	20	60	1 00	3 50
583	Minnesota. Nearly as early as Marblehead; of dwarf growth	5	20	60	1 00	3 25
584	Perry Hybrid. Very early and of large size; most valuable for market . .	5	20	60	1 00	3 50
585	Melrose. As early as the Cory, and with ears twice as large; valuable for market	5	25	85	1 50	5 00
586	Burpee First of All. Extra early; ears medium size; tender and sweet .	10	25	85	1 50	5 00
590	Extra-Early Adams. Not Sugar Corn, but largely grown for early use . .	5	20	60	1 00	3 25

SECOND EARLY, or INTERMEDIATE.

593	Shaker Early. Very large, white grain, and quite early	5	20	60	1 00	3 25
599	Crosby. Matures after Minnesota; fair-sized ears of good quality	5	20	60	1 00	3 25
608	Pee and Kay. Ears large and thick; a desirable variety	5	20	60	1 00	3 25
610	Potter Excelsior. Good size, and a week earlier than Large Excelsior . .	5	20	60	1 00	3 25
611	Moore Concord. Of strong growth; ears large and well filled	5	20	60	1 00	3 25
612	Amber Cream. Of strong growth, producing long and handsome ears . .	5	20	60	1 00	3 25
617	Early Adams. Not a Sugar Corn, but grown extensively all over the country for market purposes	5	20	60	1 00	3 00

GENERAL CROP.

618	Large Excelsior. Has large ears, and is moderately early	5	20	60	1 00	3 25
618a	Large Eight-Rowed. Very productive, and of superior richness	5	20	60	1 00	3 25
619	Asylum. Thick, twelve-rowed	5	20	60	1 00	3 25
620	Triumph. Large ears, very white; productive	5	20	60	1 00	3 25
622	Hickox Improved. Handsome ears, very white and of rich flavor	5	20	60	1 00	3 25
624	Roslyn Hybrid. Large growing variety of very fine quality	5	20	60	1 00	3 25
626	Stowell Evergreen. Remains green a long time, and is highly prized; one of the most popular varieties	5	20	60	1 00	3 25
626a	Pink Cob Evergreen. Earlier than Stowell Evergreen; large flat grain; fine quality	5	20	60	1 00	3 25
627	Early Mammoth. Very large and not very late	5	20	60	1 00	3 25

LATE.

630	Black Mexican. Very sweet, and of superior flavor; grains black	5	20	60	1 00	3 50
634	Ne Plus Ultra. Small, but one of the sweetest sorts grown	5	20	70	1 25	4 00
640	Late Mammoth. Rank in growth; large ears, rich and sweet	5	20	60	1 00	3 25
644	Egyptian. Large and of superior quality; largely used for canning . . .	5	20	60	1 00	3 25
646	Country Gentleman. Same as Ne Plus Ultra, but with large ears; of delicious quality	5	20	60	1 00	3 50
650	Sweet Fodder Corn. For soiling and ensilage					2 00

For FIELD CORN, see Cereals, page 51.

CUCUMBER.

CONCOMBRE. *Pepino.* Gurfe.

CULTURE.—For very early, sow seeds in hotbeds upon pieces of sod, or in small pots, and they can be readily transplanted with a gain of about six weeks before they can be sown in the open ground. Plant out in rich soil when danger of frost is over, or they may be protected by hand glasses, or even by a paper held down at the corners with a handful of earth. For general crops, sow in the open ground as soon as the weather is settled and warm, and again every two weeks for a succession. For pickles, sow from the middle of June to the first week in July. Sod-land, turned over in the fall, is the best for them. Plant in hills four feet apart, putting a shovelful of well-rotted manure in each hill.

CUCUMBERS.

SMALL GHERKIN.

FRAME CUCUMBER.

ENGLISH CUCUMBERS FOR FRAMES.

(Concombre especes Anglaise pour Couches.)

CULTURE.—The following are for growing in hotbeds, or houses particularly constructed for forcing, so that a supply can be furnished during the winter months, at which time the prices are very remunerative. Sow seeds in October, November or December, according to the time they are wanted, in small pots, in fibrous loam, lightened and enriched with old manure, taking care to give plenty of air and water. Robustness of habit is especially valuable in winter, and therefore the soil should not be too light. Plunge the pots in a frame near the glass, where there is a little bottom heat, and keep them covered with a sheet of brown paper until the seeds germinate. Afterwards uncover and ventilate to insure sturdiness of habit. More seeds should be planted than the number of plants required, as some may fail to grow,

CUCUMBERS—continued.

and others that germinate may be weaklings. None but strong plants should be employed. It will be necessary to fertilize the pistillate flowers with the staminate, in order to render the vines productive, as, owing to the absence of insects, they will not produce a crop under glass the same as in the open ground.

 Packets contain from five to fifteen seeds each, according to sort.

IMPROVED THICK-LEAVED DANDELION.

DANDELION.

PISSENLIT. *Amargon.* *Pardebflum.*

CULTURE.—The Dandelion is a hardy perennial plant, and one of the most desirable early spring salads. Sow in early spring, in drills half an inch deep and eighteen inches apart; thin out the plants to twelve inches. Keep clear of weeds during the summer, and the ensuing spring the leaves will be fit to cut. They are best, however, when blanched, which makes them tender, and destroys to some extent their bitter taste without in any way impairing the qualities which make them desirable as greens. The blanching may be done by placing a couple of boards over the rows thus:  This excludes the light and improves the greens, rendering them far superior to those growing wild in the grass without cultivation, which are almost sure to be bitter, and are often unsightly and tough.

737 French Garden	\$0 20	\$0 60	\$2 00
738 Improved Thick-leaved	40	1 00	4 00

EGG-PLANT.

AUBERGINE. *Berengena.* *Cierpfjanze.*

CULTURE.—Sow in hot-beds, very early in spring, and transplant when two inches high into a second bed or into small pots. If that is not done, thin to four inches apart. Do not plant out till the weather becomes perfectly settled and warm. Cool nights or wet weather will check them. Keep some back in frames for a second planting, in case of weather changing unexpectedly. Keep plants watered for a few days if the sun is hot when put out. Set out plants three feet by two.

748 Striped. Fruit is striped purple and white	30	85	3 00

IMPROVED NEW YORK PURPLE EGG-PLANT.

ENDIVE.

CHICOREE. *Escarola o Endivia.* Endivie.

CULTURE.—Sow in June, July and August; cover lightly; when up, thin out to eight inches apart, and water well afterward, if dry. When the leaves are six or eight inches long, blanch by gathering in the hand and tying together near the top with yarn or bast. This must be done when quite dry, or they will rot. At the approach of winter, take up carefully, with a ball of earth to each plant, and place close together in frame or cellar for use. They must be kept dry, and have plenty of air, or they will rot.

BROAD-LEAVED ENDIVE.

ribbed sort; very fine light green leaves; for fall or winter

755 Imperial Curled. Also a broad-	20	60	2 00

FENNEL, FLORENCE or NAPLES.

FENOUIL DE FLORENCE. *Finocchio di Napoli.*

CULTURE.—Sow in spring in rows sixteen to twenty inches apart. Thin out so as to have the seedlings five or six inches apart, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles Celery, but with a sweet taste and a more delicate odor. Per oz., 15 cts.; per ¼lb., 40 cts.; per lb., \$1.50.

KALE, or BORECOLE.

CHOU VERT FRISE. *Col. Krausfohl.*

CULTURE.—Nos. 759 to 773 are cultivated and grow exactly like cabbage. No. 777 sow in September for early greens. Sow No. 780 early in the spring in a hotbed, and when from one to two inches high transplant into a bed or border that has been highly manured and deeply dug. The plants should stand two feet apart in rows three feet apart. The soil should be kept mellow and free from weeds. Cover with litter or leaves during the winter. Plants started and grown in this way should be fit to blanch the following spring. The seed may also be sown early, in the open border, and transplanted in rows (as directed above), as soon as out of the seed-leaf; but they will need to be a year older than the hotbed plants before being fit to blanch. Sea-Kale is not fit to eat till it has been blanched, either under large pots, or by banking up with sand. The midribs are the parts eaten. They are cooked like asparagus, and usually served with drawn butter.

TALL CURLED KALE.

	Per oz.	¼lb.	Per lb.

780 Sea-Kale. Very fine; resembles Celery in appearance	30	85	3 00
783 Pe-tsai. (The Chinese Cabbage.) Grows like a Cos Lettuce; delicately cooked as Spinach or raw for salad; best as a fall crop	30	85	3 00

KOHLRABI.

CHOU-RAVE. *Colinabo.* Kohlrabi.

VIENNA KOHLRABI.

CULTURE.—This is an excellent vegetable, and should be grown in every garden. Sow in spring, in rows eighteen inches apart, afterwards thinning the plants to eight or ten inches. If the weather is suitable the thinnings may be planted, but it is considered difficult to transplant. Keep the weeds down, and when the thickened stems above ground are two or three inches 'brough they are fit to eat, and should be used at once, being tough when old. They are cooked same as Turnips, and, when well grown and used at the proper stage, are tender and very palatable.

	Per oz.	¼lb.	Per lb.
784 Early White Vienna. Handsome and delicate; white ball	\$0 25	\$0 75	\$2 50

790 Early Purple Vienna. For frames	40	1 00	4 00
791 Large White or Green. Forms a larger ball; not so fine, but more productive	15	40	1 25

LETTUCE.

LAITUE. *Lechuga.* Salat.

CULTURE.—Sow Nos. 799, 802, 806 and 807 in hotbeds, in March, and in the open ground as soon as it can be worked, and transplant to rows eight inches apart. Sow in two weeks' time same varieties again, as also Cos, for a succession. In August sow any of the varieties. In October some of these may be planted in frames, to head in winter and early spring. Always sow thin and thin out well, or the plants will not be strong. The last spring sowing had better be grown where sown, being thinned out to six or eight inches apart. To have Cos in good order, they must be sown in a hotbed early in the year, and transplanted in a coldframe, so as to have good plants to set out at the opening of the ground. They require tying for a few days, when grown, to blanch. Lettuce requires good ground, enriched with thoroughly rotted manure and well pulverized. The after-culture should be close and careful, to secure the best results.

TRIANON COS LETTUCE.

		Per oz.	¼ lb.	Per lb.
795	Emperor Forcing. Yellow, earliest of all; suited only for frame	\$0 25	\$0 75	\$2 50
797	Selected Buttercup. Yellow, solid, rather under-sized heads; for forcing or outdoors	15	40	1 25
799	Thorburn Market-Gardener's Private Stock. A selected strain; solid, large heads, resisting the sun for a long time before shooting up. Valuable also as an early sort, to be started under glass for early spring transplanting into open ground.	25	75	2 50
800	Coldframe White Cabbage. For starting in cold frames and setting out in early spring. Extensively used by market-gardeners	20	50	1 50
801	Hubbard Market. A large, white Cabbage variety; equally valuable for forcing or open ground	15	40	1 25
802	Large Boston. A fine strain for forcing under glass; very large, solid heads.	25	75	2 50
803	Big Boston. On the style of Large Boston	20	60	2 00
806	Early Curled Simpson. A leading early sort; very tender, white seed	15	40	1 25

809	American Gathering. Twisted and curled leaves; fine variety, either for early or late sowing.	15	40	1 25
812	Thorburn Glass-house. For forcing under glass. The popular winter-forcing variety	25	75	2 50
815	Tennisball White Seed. A well-known forcing variety	15	40	1 25
817	Stone Tennisball Black Seed. Forms close, hard heads; for forcing	15	40	1 25
829	White Summer Cabbage. Close heads, of good size; fine for summer	15	40	1 25
837	Golden Stone-Head. A handsome Head-Lettuce; small and solid; for forcing	15	40	1 25
840	Salamander Head. Fine, compact heads, which resist the summer heat admirably; is very popular in some sections	15	40	1 25
841	Mammoth Large Yellow Butter, Black Seed. Fine market strain	25	75	2 50
843	Large Yellow Butter, Gray Seed. One of the best; large heads	15	40	1 25
845	Grand Rapids Forcing. Large, tender heads; one of the best for early forcing	15	40	1 25
846	Deacon. A large, solid Cabbage-Lettuce for summer	15	40	1 25
847	Shotwell Brown Head. Large, handsome, tender heads; very hardy	20	60	2 00
848	Brown Dutch. Leaves tinged with brown; large, solid heads; very hardy	15	40	1 25
849	Tilton White Star. A new white-seeded sort on the style of the Black-Seeded Simpson. Excellent for forcing or early planting outdoors.	15	40	1 25
850	Improved Hanson. Very large and solid; sweet, crisp and tender; withstands the hot sun well.	15	40	1 25
851	Iceberg. Very solid, large head; white seed	20	60	2 00
852	Eureka. Brown, head, large, good	15	40	1 25
860	White Cos Romaine. Fine, if sown very early; requires tying up to blanch	15	40	1 25
862	Trianon Self-Closing Cos. The finest of all the Cos sorts, resisting warm weather	15	40	1 25
864	Balloon Cos. Very large; for late sowing, to come to perfection in the autumn	15	40	1 25

ICE-PLANT.

FICOIDE GLACIALE. *Escarchosa.*

CULTURE.—Sow in good garden soil as soon as the ground becomes warm in spring, in shallow drills one foot apart. Thrives well in hot, dry climates. Desirable for boiling like Spinach, or for garnishing.

	Per pkt.	Per oz.
866 Clean Seed	\$0 05	\$0 40

LEEK.

POIREAU. *Puerro.* *Porro.*

CULTURE.—Sow very early in the spring, in drills six inches apart and one inch deep. Thin out to one inch. When about seven inches high, transplant them in rows twelve inches apart, and as deep as possible, but do not cover the young center leaves. Water thoroughly, if dry when planted out. Draw earth up to them as they grow; rich soil is required. Take up and store in earth in a cool cellar before winter weather. The seed may also be sown in September, and the young plants transplanted in spring to where they are to remain.

	Per oz.	¼lb.	Per lb.
869 Best Large Flag Winter. Hardy and productive	\$o 20	\$o 60	\$2 00
872 Large Rouen Winter. A standard sort; remains long in good condition	20	60	2 00
873 Large Carentan. A superior variety, with distinct and dark- colored leaves; stout in habit, and hardy	20	60	2 00
874 London Summer	15	40	1 25

LEEK.

MARTYNIA.

(For pickles.) *Gemsenhorn.*

CULTURE.—Sow in May in the open ground, three feet apart in each direction, where the plants are to remain; or, the seed may be sown in a hot-bed, and the seedlings afterward transplanted. These varieties are productive, and fine for pickles. Pick when small and tender, and preserve the same as Cucumbers.

875 Craniolaria	\$o 30	\$o 75	\$3 00
876 Proboscidea	30	75	3 00
877 Lutea	30	75	3 00

MARTYNIA.

MUSHROOM SPAWN.

BLANC DE CHAMIGNON. *Seta.* *Champignonbrut.*

CULTURE.—Mushrooms may be grown in cellars, under benches of green-houses or in sheds, wherever the temperature of 50 degrees can be kept up through the winter. The beds should be made from November to February, according to the time the Mushrooms are wanted, and it requires about two months for them to begin bearing. Secure fresh horse-dung, free from straw and litter, and mix to an equal bulk of loam from an old pasture with it. Keep this under cover, taking care to turn it every day to prevent heating, until the pile is large enough to make a bed of the required size. Three or four feet wide, eight inches deep, and any length desired, are the proper proportions for a bed; but these may be varied. Prepare the mixture of loam and manure, making the bed in layers, and pounding down each with the back of the spade. Leave this to heat through for a few days, and as soon as the heat subsides to 90 degrees, make holes in the bed about a foot apart each way, into which put pieces of the spawn two or three inches in diameter; fill up the holes with the compost, and at the expiration of a week or ten days the spawn will have thoroughly diffused itself through the bed. Spread a layer of fresh soil over the heap to the depth of two inches, and cover with three or four inches of hay, straw or litter. Examine the bed often to see that it does not get dry. Take special care, however, when water is given, that it be at a temperature of about 100 degrees.

From experience with French and English Spawn, we find there is an important difference between them. If the manure in the bed is in proper condition, the French Spawn will take hold and grow fully as well as the English; but if the bed is not in the right state, it will often rot. The English Spawn, on the contrary, after starting a little will remain in a comparatively dormant state for a long time without losing its vitality. It is well to keep these points in mind in ordering spawn.

English Spawn. 12 cts. per lb., 10 lbs. for \$1, 100 lbs. for \$8.

French Spawn. Per 3-lb. box. \$1; in bulk, per lb., 30 cts.

MUSHROOM.

MELON, MUSK.

MELON MUSCADE. *Melon Muscatel.* Cantaloupe.

CULTURE.—Select a light, sandy, rich soil, and after all danger of frosts is over, and the ground has become warm and dry, plant in hills four to six feet apart each way, six to twelve seeds to the hill.

When up, and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground, and pinch the ends of the growing shoots to induce early fruiting. Ashes, lime, or even dry road-dust, is excellent to sift over the young plants when the dew is on, to prevent the attacks of insects. A few hills for early use may be had by sowing in hot-beds on pieces of sod or in pots. The seed may also be started out of doors under hand frames or glasses.

It is quite important that proper soil be selected for growing Musk Melons, as on heavy soil the quality will be poor.

Per oz. ¼ lb. Per lb.

873 **Long Island Beauty.** On style of Hackensack. The earliest and finest in quality, and the most beautiful Musk Melon

		Per oz.	¼ lb.	Per lb.

1086	Welsh. The leaves are used for salad early in spring. Sow early in fall	20	60	2 00
1088	Imported Shallot Seed . . . per pkt., 10 cts.			

ONION SETS, ETC.

Onion Sets and Tops should be planted near the surface, in drills about twelve inches apart and four inches in the rows. They must have high culture for the best results. These last are valuable for early use, and where Onions from seed cannot be raised the first year, they are essential.

These are the prices ruling in January; later on they may be higher, owing to shrinkage and rotting.

	Per qt.	Per ½ pk.	Per pk.	Per bus.
Yellow Onion Sets	\$0 20	\$0 60	\$1 00	\$3 00

1116	Moss Curled. Very pretty	10	25	75
1117	Fern-leaved. Fine curled	10	25	75
1118	Plain. The ordinary form	10	15	40
1120	Beauty of the Parterre. Distinct and most beautiful for edgings, and equally good as a condiment	15	40	1 25
1122	Hamburg or Rooted. Edible roots, much like Parsnips	10	25	75

BELLEVILLE ILL., Dec. 13, 1895.

J. M. THORBURN & Co.:

Gentlemen—From the two barrels of Carman No. 3 I bought of you last spring, I dug 512 bushels of as fine, smooth, even-sized potatoes as ever grew. There were not small ones enough to count the bushels. Don't you think I have broken the record of regular field culture?

Yours truly,

D. F. MILLER.

PEAS.

Pois. Chicharos o Guisantes. Erbsen.

CULTURE.—A week may be gained in earliness by sowing a quantity in moist sand, placed in a box in the cellar, and planting outside when well sprouted.

Light, dry soil, not over rich, suits the Pea. Sow as early as the ground can be worked, and again every ten days for succession, up to the first of June, after which there is danger from mildew. Sow in single or double rows, from four to six feet apart, according to the different heights, about an inch apart in the rows (except such sorts as we note to sow thinly), and four inches deep. In this climate the O'Rourke Peas, if planted from the 10th to the last of August, will produce a fair crop for fall picking, when Peas will be most acceptable. Hoe often, and keep the ground clean and fine. The tall sorts can be made to bear more freely by pinching-in. The dwarf varieties may be grown in beds like Bush Beans, with rows about the same distance apart. The holes which are sometimes found in Peas are caused by the Pea Weevil (*Bruchus pisi*). This insect is a native of this country, but, as usual with such pests, has spread rapidly, and is now found nearly all over the world. The beetles lay their eggs on the young pods, and the larvæ, as soon as hatched, make their way through the pods into the nearest Peas. They do not, as is sometimes supposed, destroy the germ, for Peas will grow if they are infested, but the plant is likely to be more feeble, and for this reason will not produce as large a crop as if free from the weevil.

EXTRA EARLY PEAS.

		Height in feet	Per qt.	Per ½pk.	Per pk.	Per bus.
1141	Thorburn Extra-Early Market. Our standard market garden extra-early Pea; productive and profitable to grow	2½	\$0 25	\$0 75	\$1 25	\$4 50

1330 Connecticut Field. Grown for stock; productive	10	25	

POTATO.

POMME DE TERRE. Patatas. Kartoffel.

CULTURE.—In order to have the best success in growing Potatoes, and to secure healthy, vigorous growth

CARMAN NO. 1 POTATO.

and a crop free from rot, it is necessary to plant as early as the ground can be made ready. Select a rich soil, and plant in rows three feet apart, and the sets one foot in the rows. To kill the young weeds, run a light steel-tooth harrow over the field lengthwise of the rows. This will allow the crop to get the start of the weeds, besides breaking up all lumps and leveling the ground ready for the cultivator. If wood-ashes and plaster can be procured, sow a good dressing over the field after the Potatoes are up. If a *very early* crop is desired, it will be necessary to *sprout* the Potatoes before planting. Cut the Potatoes into pieces of any

size desirable, and place in a warm, light room from four to six weeks before required for planting in the open ground. During this time shoots will start out strong and vigorous, so that, as soon as planted, they will send out roots and grow much more rapidly than those treated in the ordinary way. Another method is to place the sets in a hotbed two weeks before they are wanted, and then lift carefully and set out on fresh horse-dung, so that the heat will cause them to start at once. If the Colorado potato-beetle makes its appearance, the vines must be dusted with Paris green, mixed with about eighty parts of plaster; or, what is better, mix the Paris green in water, one small tablespoonful to a pail, and apply with a small brush or broom. Take care to stir the mixture often, or else the Paris green will settle to the bottom. Two or three applications during the season will usually suffice to clean off all the beetles.

☞ These are the prices ruling in January; later on they may be higher.

EARLY VARIETIES.

		Per ½ pk.	Per pk.	Per bus.	Per bbl.
1349	The Thorburn. We recommend it as positively the best for first crop. Earliest and best of all productive sorts. A seedling of Beauty of Hebron, which it resembles; quality is unsurpassed.	\$0 40	\$0 60	\$1 75	\$3 25

1352	New Queen. Productive and of fine quality	35	50	1 50	3 00
1355	Early Puritan. White skin and flesh; moderately early	35	50	1 50	3 00
1357	Early Sunrise. The true type of Early Rose	35	50	1 50	3 00
1362	Sunlit Star. Skin clouded with rose color; quality good	35	50	1 50	3 00
1363	True Early Rose.	35	50	1 50	3 00
1364	Early Ohio. Round tubers; very early; fine quality	35	50	1 50	3 00
1365	Early Maine. Smooth; extra early; very productive	35	50	1 50	3 00

INTERMEDIATE AND LATE VARIETIES.

1368	Carman No. 1. In every respect the finest second early Potato ever offered. (For description, see Novelties.)	50	75	2 00	4 50
1369	Carman No. 3. By far the best late Potato grown; enormous yielder; largest and handsomest tubers; finest quality. (For description, see Novelties.) One pound by mail, postage paid, 25 cts.	65	1 00	3 50	7 50
1370	Rural New-Yorker No. 2. Very few and shallow eyes; pure white skin and flesh; unexcelled table quality; immense yielder, and intermediate in ripening	35	50	1 50	3 00
1382	State of Maine. Very productive; white skin and flesh; free from rot, and of superior quality; fine late variety	35	50	1 50	3 00
1393	Late Beauty of Hebron. Productive and of first quality	35	50	1 50	3 00
1394	Delaware. Large, and of fine quality; in color white; immense yielder	35	50	1 50	3 00
1402	Empire State. Very productive; flesh white and floury; skin white and smooth	35	50	1 50	3 00
1403	Irish Daisy. Very productive; good shape; late	35	50	1 50	3 00

PEPPER.

PIMENT. *Pimiento.* Pfeffer.

CULTURE.—Sow in hotbeds in March, and when the soil has become warm, set in rows two feet apart and eighteen inches in the rows; hoe frequently, and keep down all weeds. The plants may also be forwarded in small pots.

RUBY KING PEPPER.

		Per oz.	¼lb.	Per lb.
1410	Sweet Golden Dawn. Very handsome and distinct, and of mild flavor	\$0 20	\$0 60	\$2 00
1411	Giant Emperor. Scarlet; very large and thick	35	1 00	3 50
1412	Ruby King. Beautiful bright red; large fruit, mild; one of the best	25	75	2 50
1413	Large Squash. Productive; much used for pickles	20	60	2 00
1414	Long Red Cayenne. Bright red; very productive	25	75	2 50
1415	Large Bell. Large and mild	25	75	2 50
1416	Oxheart. Heart-shaped and of medium size; fine for pickling	25	75	2 50
1417	Procopp Giant. Very large size and brightly colored; fine flavor	35	1 00	3 50
1418	Large Golden Upright. Quite distinct; double the size of Golden Dawn, and quite sweet; fine for Mangoes	35	1 00	3 50
1419	Brazilian Sweet Upright Mammoth. Bright red; very large	50	1 50	5 00
1420	Kaleidoscope. So called because the fruits are constantly changing in color, through all shades from light yellow to intense scarlet	25	75	2 50
1421	Cardinal. (New.) Grows about six inches long; mild and thick-fleshed; brilliantly colored	25	75	2 50
1422	Cranberry. Small fruit; used for pickles	25	75	2 50
1423	Red Cherry. Cherry-shaped; for pickles, for which they are largely used	25	75	2 50
1424	Red Etna. Rich, deep scarlet; medium size, sweet, mild	25	75	2 50
1425	Red Chili. Very productive; very small, red and very pungent	25	75	2 50
1426	Red Cluster. A new type of Chili, with upright, bright red fruits	25	75	2 50
1427	Monstrous. Very large French sort	25	75	2 50
1428	Sweet Spanish. Large, mild; used for salad	25	75	2 50
1429	Sweet Mountain. Large, regular, and of mild flavor	25	75	2 50
1430	Celestial. A Chinese Pepper; at first fruit is yellow, and when fully matured becomes a deep scarlet	25	75	2 50
1431	Golden Queen. Same as Ruby King, but that it is <i>yellow</i>	35	1 00	3 50
1432	Coral Gem. Small, long, slender fruits	40	1 25	4 50
1433	Elephant's Trunk. Long, scarlet fruits, resembling in shape the trunk of an elephant	40	1 25	4 50
1434	Tabasco. Very small, slim Peppers, shape of the Chili, but smaller	40	1 25	4 50
1435	Bird's-Eye, or Creole. Small red fruit, size of a Marrowfat pea	40	1 25	4 50

RAMPION.

RAIPONCE. *Reponche.* Rapunzel-Kübe.

CULTURE.—Sow in the open ground early in May, either broadcast or in drills ten inches apart. As the seed is very fine, it merely requires to be pressed firmly into the soil. Thin out the seedlings if they come out too thick, and water frequently during hot weather. The roots may be gathered for use from October onward throughout the winter.

	Per oz.	¼lb.	Per lb.
1438 Rampion. The roots and leaves are excellent as salad	\$0 40	\$1 25	\$4 00

ROQUETTE.

ROQUETTE. *Jaramago.*

CULTURE.—Sow early in spring, in rows, and thin out to eight or ten inches. If kept well scuffled and watered, the tart flavor of the leaves is greatly diminished. This flavor is not pronounced in the small leaves, which are used for salad. The flowers, appearing from May to June, have very much the odor of orange blossoms.

	Per oz.	¼lb.	Per lb.
1439 Roquette	\$0 10	\$0 30	\$1 00

RAMPION.

SCARLET TURNIP WHITE-TIPPED RADISH.

EARLY WHITE TURNIP RADISH.

ROUND BLACK SPANISH WINTER RADISH.

SCARLET TURNIP FORCING RADISH.

WHITE SUMMER TURNIP RADISH.

FRENCH BREAKFAST RADISH.

OLIVE-SHAPED GOLDEN YELLOW RADISH.

THORBURN IMPROVED BLACK SPANISH RADISH.

RADISH.

RADIS ET RAVE. *Rabanos y Rabanitos.* Radies und Rettig.

CULTURE.—Sow as soon as the ground is dry in the spring, in light, rich soil, in rows eight to twelve inches apart, every week or ten days for a succession, up to the middle of June, after which they are but little used, unless a cool northern spot can be had, where the ground is shaded during part of the day. Sow also in early fall for late crops and winter use. Sow 8 to 10 lbs. to the acre.

Those marked with (*) are best suited for market-gardeners.

WHITE STRASBURG SUMMER RADISH.

NON PLUS ULTRA RADISH.

RHUBARB.

RHUBARB. *Ruibarbo.* *Rhabarber.*

CULTURE.—Sow seed in a coldframe, in a fine, rich, sandy loam, about the first of March, in drills four inches apart. Keep the frame covered during nights and cold days, so that the soil will not freeze, and in six to eight weeks the plants will be large enough to set in the open ground. Transplant to a rich soil, and set in rows twelve inches apart and twelve inches in the rows. The following spring transplant again to four or five feet apart each way, and the next spring the stalks will be large enough to pull. When roots are set out, plant them four or five feet apart each way, and keep the weeds down. If roots are used, a crop may be had after one season, which is much better than sowing seeds where only a few plants for family use are needed. In the fall the bed should have a thick dressing of coarse manure, to be spaded under in spring.

SALSIFY.

1514	Linnaeus.	The earliest	Per oz.	1/4 lb.	Per lb.
			\$0 20	\$0 50	\$1 50
1515	Victoria		20	50	1 50
	Roots	each, 10 cts.; per doz., \$1.			

SALSIFY, or VEGETABLE OYSTER.

SALSIFIS. *Ostion Vegetal.* *Hasenwurz.*

CULTURE.—Sow as early as the ground can be worked in the spring, in drills twelve inches apart, one inch deep, and thin out to six inches in the row. Keep them free from weeds. Cultivate the same as for Carrots and Parsnips. A part of the crop may be left in the ground till spring, when it will be found fresh and plump. The roots are cut into pieces half an inch long, boiled until tender, and then served with drawn butter, in which way it is a delicious vegetable. They are also mashed and baked like Parsnips, and have a sweet, agreeable flavor. Mashed and fried, the flavor is much like that of the oyster. Sow eight to ten lbs. to the acre.

		Per oz.	¼lb.	Per lb.
1528	Long White French	\$0 10	\$0 30	\$1 00
1530	Mammoth Sandwich Island. Large and superior . .	15	50	1 50

SCOLYMUS.

A vegetable from Spain. The roots resemble a small Parsnip, and will keep through the winter like a Turnip. It is cultivated exactly like the Carrot, except that it should be grown in rows three feet apart and eighteen inches in the rows. It is eaten boiled, like Salsify.

1535	Scolymus	Per oz.	1/4 lb.	Per lb.
		\$0 20	\$0 60	\$2 00

SWISS CHARD, or SILVER BEET.

This is a Beet producing only leaves of a superior quality to the ordinary Beet's, and excellent as greens. Cultivate about the same as Spinach, by sowing the seed in early spring, in drills about a foot apart. As it grows, thin out for use, and keep clear of weeds if success is desired. Good cultivation will greatly increase the delicacy and tenderness of the leaves.

1536	Swiss Chard	Per oz.	1/4 lb.	Per lb.
		\$0 10	\$0 20	\$0 60

SPROUTS.

CHOUX VERTS NON POMMES.

CULTURE.—Sow No. 1537 very early in spring, and Winter Kale in September. Full directions for growing the latter will be found on page 25, under head of Kale.

1537	Spring Sprouts, or English Rape.	Per oz.	1/4 lb.	Per lb.
	per qt., 25 cts.			
1538	Winter or Siberian, Thorburn Improved	\$0 10	\$0 20	\$0 50

SWISS CHARD.

SCORZONERA.SCORZONERE. *Escorzonera.* Scorzonwurzel.

CULTURE.—Cultivate the same as Salsify. It is cooked in the same manner, but on account of being somewhat more difficult to raise, is seldom seen in cultivation. Considered by many superior to Salsify. It is also called Black Salsify.

	Per oz.	¼ lb.	Per lb.
1541 Scorzonera	\$0 20	\$0 60	\$2 00

SCORZONERA.

SORREL.OSEILLE. *Acedera.* Sauerrampfer.

CULTURE.—Sow in spring, in drills eighteen inches apart, in a rich soil, and keep the flower-stems cut off as they appear. It remains in the ground year after year, and only needs to be taken up and divided once in four or five years. To be cut and cooked precisely like Spinach; or it is excellent cooked with it, one-third Sorrel to two-thirds Spinach. Very nice to be eaten after it has become cool. Inasmuch as the hot sun tends to increase its acidity, a northern exposure, is preferable.

	Per oz.	¼ lb.	Per lb.
1544 Garden	\$0 15	\$0 40	\$1 25

SKIRRET.CHERVIS. *Zuckerrüben.*

CULTURE.—Sow in drills half an inch deep, a foot apart; thin out to eight inches in the row; keep down the weeds. Take up the roots before winter, and store in sand or earth. It is a plump, fleshy root, containing a quantity of sugar, and is eaten like Scorzonera or Salsify.

	Per oz.
1546 Skirret	\$0 30

SORREL.

SPINACH.EPINARDS. *Espinaca.* Spinat.

CULTURE.—Sow in early spring, in drills a foot apart (10 to 12 lbs. to the acre), every two weeks for a succession, and as it grows, thin out for use. For fall use, sow in August, and for winter crop in September. Cover that which is left out over winter with straw or leaves, after the weather becomes quite cold. Keep clear of weeds. Sow the seed of New Zealand (which must be scalded and soaked in hot water before sowing) in hills three feet apart each way, three or four seeds in a hill. This is fit for cutting all summer.

	Per oz.	¼ lb.	Per lb.
1566 Round Viroflay (Thick-Leaved). Has very large and thick leaves	\$0 10	\$0 15	\$0 35
1570 Round-Leaved. A standard sort	10	15	35
1571 Lettuce-Leaved. Popular French sort	\$0 10	\$0 15	\$0 35
1573 Curled Leaved Savoy, or Bloomsdale. Large, tender leaves; fine	10	15	35
1574 Round Flanders. Excellent and productive	10	15	35
1575 Long-Standing (Round Thick-Leaved). Dark green; very long standing before running to seed	10	15	35
1576 Victoria (new). Extra dark black-green color. Two or three weeks later than the ordinary "Long Standing." For spring sowing	10	20	50
1578 Prickly. Vigorous and hardy	10	15	35
1579 New Zealand Summer. Distinct; grows well during hot weather	10	30	1 00

LONG-STANDING SPINACH.

SQUASH.

COURGE. Calabaza. Speise Kürbis.

CULTURE.—Sow in hills in the same manner and at the same time as Cucumbers and Melons; the bush varieties three to four feet apart, and the running kinds from six to nine feet apart.

VARIOUS SQUASHES.

BUSH VARIETIES.

	Per oz.	¼ lb.	Per lb.
1583 Early Golden Bush. Fine for summer use; not as early as the White Bush.	\$0 10	\$0 20	\$0 60
1584 Golden Custard. Mammoth strain of the Golden Bush. A valuable new bush variety; golden yellow flesh; fine quality. . .	10	25	75
1585 Early White Scallop Bush. A good early shipping variety. . .	10	20	60
1586 Silver Custard. A mammoth strain of the Early White Bush. . .			
It is very large, and the flesh is of fine quality.	10	25	75
1588 Summer Crookneck. Yellow fruit; distinct; best for summer	10	20	60
1589 Summer Crookneck, Long Green	10	25	75
1589a Giant Summer Crookneck. Double the size of the above	10	25	75
1590 Egg-Plant Bush Squash. A white-fleshed bush variety; oval in shape; suitable for frying like egg-plant	10	25	75
1590a Cocozell Bush. A new variety; oblong in shape, green and white striped; an excellent summer sort	10	25	75

RUNNING VARIETIES.

1599 Pike's Peak. Thick bright orange flesh; fine winter sort	10	25	75
1600 Essex Hybrid. A good fall and winter sort	10	25	75
1601 Marblehead. Resembling the Hubbard, but has gray skin	10	25	75
1602 Perfect Gem. Round, white, fine quality, productive; good either for fall or winter	10	25	75
1603 Red Japan Small Turban. Fine, small, bright red, winter sort	10	25	75
1604 Cocoanut. Of first-rate quality, and very prolific.	10	25	75
1605 White Chestnut. In the form of the Hubbard; as dry as a boiled chestnut	10	25	75
1606 Fordhook. One of the best winter Squashes; fine quality	10	25	75
1607 Red China. Small size; red skin and orange-yellow flesh.	10	25	75
1608 French Olive. Olive-shaped; golden yellow flesh of good quality	15	50	1 50
1609 Pineapple. Peculiar shape; white skin and flesh; fine late sort	10	25	75
1610 Canada Crookneck. Small, well-known winter sort; green skin.	10	25	75
1611 Der Wing. Light yellow flesh; very sweet; small, warty winter sort.	10	25	75
1612 The Warren. A new type of the Essex Hybrid; of superior quality.	10	25	75
1613 Mammoth Chili. Grows to an enormous size; rich orange-yellow.	15	50	1 50

ITALIAN VEGETABLE MARROW.

VEGETABLE MARROW.

1614 English. White flesh, outside yellow; grows about nine inches long; ribbed	10	25	75
1615 Italian (Cocozella di Napoli). Grows about twenty inches long, with a diameter of three or four inches. Skin smooth, dark green marbled yellow or paler green. In Italy it is eaten when quite young.	10	25	75

TOMATO.

TOMATO. *Tomates.* Liebesäpfel.

CULTURE.—Sow in a hotbed in early spring, or the seed may be sown in shallow boxes and placed in a window

when one does not wish to have the trouble of making a hotbed. Transplant to the open ground when all danger of frost is past, setting the plants 3 or 4 feet apart each way. Some support should always be provided for the vines, to keep the fruit from touching the ground. (See the tomato supports illustrated on page 57 of this catalogue.) Fruit may be had several weeks earlier by sowing seed quite early, and transplanting to small pots; when these are filled with roots, shift to a larger size, and transplant to open ground when the weather is warm and settled, shading from the sun for a day or so. As the roots are not disturbed in taking plants from the pots, the plants suffer no check, but grow right on.

Skillful cultivators, by selecting and hybridizing, have greatly improved the Tomato.

		Per oz.	¼ lb.	Per lb.

1670	Golden Queen. Large yellow; very handsome; fine quality	25	75	2 50
1672	Red Cherry. Fruit about an inch in diameter, in bunches; used in pickles . . .	30	85	3 00
1675	Yellow Cherry. Similar to preceding, save in color	30	85	3 00
1678	Red Pear-shaped. Fruit of peculiar shape; handsome and solid	25	75	2 50
1682	Red Currant. Very small and handsome; for preserves	40	1 25	4 00
1684	Upright Station Tree. Earliest of all; grows in a compact manner . pkt., 10 cts. .	60		
1685	Strawberry (Winter Cherry or Husk Tomato). Small and ornamental fruit.	25	75	2 50

TURNIP.

NAVET. *Nabo.* Rübe.

CULTURE.—For early Turnips sow as soon as ground opens in spring. Nos. 1767 to 1774 should be sown from any time in July to first of August; but the other kinds, for winter use, may be sown from middle of July to end of August. Turnips are generally sown broadcast, but much larger crops are obtained (particularly of the Ruta-Bagas) by cultivating in drills eighteen inches apart, and thinning to six inches in the drill. Sow in drills one pound to the acre; broadcast, 2 to 3 pounds to the acre.

1700 **Early Milan Purple Top.** Earliest of all; with purple top Per oz. 1/4lb. Perlb.
\$0 15 \$0 30 \$1 00

PURPLE-TOP MUNICH.

PURPLE-TOP MUNICH.

		1701	Early Milan Pure White. As early as the above; beautiful, pure white	20	40	1 25
		1705	Purple-Top Munich. One of the earliest.	10	25	75
		1707	White Egg. Oval, handsome and sweet.	10	20	60
		1708	Early Snowball. Small, and of rapid growth; pure white	10	20	60
		1709	White Model. Shape perfectly globular; snow white	10	20	60
		1715	Early Dutch. Rather flat; good white early sort	10	20	50
		1718	German Teltow. Small, early and of distinct flavor; keeps well	10	25	75
1722	Red-Top Strap-Leaf. The popular flat fall sort			10	20	50
1724	Red-Top Globe-Shaped. A standard sort in the New York market			10	20	50
1726	White Norfolk. Globular, late, Peroz. $\frac{1}{4}$ lb. Per lb. solid	\$0 10	\$0 20	\$0 50		
1728	White Strap-Leaf Flat. A good early white flat sort.	10	20	50		
1733	White French, or Rock. Very productive and a fine keeper	10	20	50		
1738	Pomeranian White Globe. Good either for table or stock	10	20	50		
1740	Large White Globe. Large English variety	10	20	50		
1742	Green Globe. Very large, white-fleshed sort.	10	20	50		
1744	Green Barrel. Very large; white flesh	10	20	60		
1748	Long White Tankard. A good keeper	10	20	60		
1750	Yellow Malta. Early and of fine flavor.	10	20	60		
1751	Yellow Globe. Good and sweet; keeps fairly well.				Per oz. $\frac{1}{4}$ lb. Per lb. \$0 10 \$0 20 \$0 60	
1753	Yellow Stone. Fine hard winter sort.				10	25 75
1758	Golden Ball. Very handsome; keeps fairly well				10	20 60

WHITE STRAP-LEAF FLAT TURNIP.

WHITE STRAP-LEAF FLAT TURNIP.

RUTA-BAGA.

1760	Yellow Aberdeen. Hardy, productive, and a good keeper	10	20	50
1761	Yellow Tankard.	10	20	50
1763	Yellow Finland. Small, early, flat and distinct	10	25	75
1764	Black Stone. Dark skin; very solid.	10	25	75
1765	Gray Stone. Solid and sweet; keeps well	10	20	60
1766	Montmagny. Yellow, purple-top; first-class sort	10	20	60
1767	Ruta-Baga, Thorburn Improved. The finest for table or for stock. Not very large	10	20	50
1768	Champion Purple-Top.	10	15	40
1769	Laing Improved. One of the earliest	10	20	50
1770	Crimson King. Very large	10	20	50
1771	Skirving Improved. Very large	10	15	40
1772	West Norfolk Purple-Top.	10	15	40
1774	White-fleshed. Large and productive	10	20	50

FORMATION OF LAWNS FROM SEED.

In the first place, see that your ground is thoroughly drained and well prepared, sowing *at least* three bushels of seed to the acre.

Perhaps the best description of soil for a lawn is the stiff loam or clayey soil which predominates in so many districts. This ought not to be by any means too rich, as a rapid growth is not wanted in the grasses of a lawn, but in preparing it for laying down, let the surface be as much alike in quality as possible, and do not stint the quantity of seed. A little White Clover is a useful addition to the seed. A very stiff clay is no better than a very dry sand for resisting drought, as it is in a measure sealed up against the insertion of roots, and, the surface contracting by the withdrawal of moisture, it is liable to crack, etc., to a great depth. Nevertheless, a stiff soil usually makes the best lawn.

If your ground is in condition to raise a good crop of potatoes, it will make a good lawn; add about half a ton of bone dust to the acre, harrowed in before sowing the seed. The success of establishing a good lawn depends much on the season and the condition of the ground at the time of sowing. A very slight raking-in will protect the seeds much, or a sowing of wood ashes will render them distasteful to birds. Rolling, however, is at all times indispensable.

The best time to sow lawn grass seed is early in the spring, or about the latter part of August. We prefer the early spring.

One important thing ought not to be forgotten in the preparation of the ground. Let it all have a surface of about six inches alike, for nothing looks worse than to see a lawn grow all in patches. One exception, however, may be mentioned, and that is, if there be any steep slopes facing the south, or other exposed places, let the earth on them be better and deeper than on the ground level, as they are more liable to burn out. When the grass becomes well established, it should be frequently cut. The oftener you mow, the finer and softer your grass will be.

It is proper here to observe that no lawn can be maintained long in good order without successive rollings. Mowing alone will not secure a good bottom without that compression which the roller tends to give. The rolling should be done in the spring, before the ground becomes dry.

TO GRASS A BANK OR TERRACE.—For each square rod, take a pound of lawn grass seed and mix it thoroughly with six cubic feet of good, dry garden loam. Place in a tub, and add liquid manure, diluted with about two-thirds of water, so as to bring the whole to the consistency of mortar. The slope must be made perfectly smooth, and then well watered, after which the paste should be applied, and made as even and as thin as possible.

FINE MIXED LAWN GRASS, CENTRAL PARK MIXTURE.

For lawns of any extent, we recommend this, our best mixture, to be sown from three to four bushels to the acre. (15 lbs. to bus.) Per quart, 25 cents; $\frac{1}{2}$ peck, 65 cents; peck, \$1; bushel, \$3.50. (We can also make special good mixtures at lower prices.)

FRENCH MIXED LAWN GRASS.

For croquet grounds, grass plats, etc., this mixture is recommended to be sown from three to four bushels to the acre. (15 lbs. to bus.) Per quart, 25 cents; per bushel, \$4.50.

THORBURN'S LAWN-RESTORING GRASS SEED.

A mixture of grasses peculiarly suited to take firm hold and grow quickly on hard, worn-out or burned spots. To restore a lawn that is partially worn out or burned, the best time is very early in spring, as soon as the frost is entirely out of the ground. The bare spots should be well scratched, or raked up, and this seed sown liberally. Cover the seed very thinly with earth, and then roll, or press down firmly with the back of the spade. Some **Lawn-Restoring Grass Seed** should be kept always on hand, and before every rain during the summer some of it should be sown on any parts that may appear thinner than the rest. Seed may be sown in fall, as late as from 1st of September to 1st of October, according to the weather. Price per quart-box, 30 cents; per bushel of 24 lbs., \$5.

GRASS SEED MIXTURES

FOR MEADOW AND PASTURE.

For every different kind and condition of soil there is a large number of grasses, either indigenous or introduced, which are especially suitable. Some sorts do best on high ground and in dry weather; others prefer plenty of moisture. Some mature so early, and others so late, that from the beginning of spring until winter sets in, there is no time when one species or another is not at its best. From these considerations the importance of sowing *many* varieties for pasture or meadow purposes will be apparent. *The quantities given are the minimum, and may be increased in some cases to advantage.*

MEADOW OR PASTURE MIXTURES FOR ONE ACRE.

No. 1. On Good Land, neither Too Dry nor Too Wet.

3 lbs.	Red Top.
1 "	Meadow Foxtail.
½ "	Perennial Sweet Vernal.

1 "	Rough-stalk Meadow Grass.
6 "	Kentucky Blue Grass.
1 "	Alsike Clover.
1 "	White Clover.

30 lbs. Price per acre, \$5.

GRASS SEEDS.

The best means of improving meadows, pastures and lawns is to sow a sufficient variety of grass seeds, and we trust our customers will give some of the kinds a trial in connection with Timothy, which by many is believed to be about the only grass to be sown.

Grass mixtures for the formation of permanent pastures, etc., are made to order, according to soil and location. For formulæ to suit different conditions, see above.

The prices of some varieties may change as the season advances.

Agrostis canina. (*Rhode Island Bent Grass.*) A valuable grass for lawns; sow three or four bushels to the acre for lawns; for pasture, one and a half to three bushels. See "Formation of Lawns," page 45. (12 lbs. to bus.) Per lb. 30 cts., 100 lbs. \$23.

Agrostis stolonifera. (*Fiorin, or Creeping Bent Grass.*) Valuable as a mixture with other pasture grasses, as it will thrive in moderately moist land on which water does not stagnate. We find it also the best sort for croquet grounds, and small door-yards or grass-plats. Same quantity as the preceding. (15 lbs. to bus.) Per lb. 30 cts., 100 lbs. \$23.

Agrostis vulgaris. (*Red-top Grass.*) A valuable permanent grass as a mixture in either meadows, pastures or lawns, growing in almost any soil, moist or dry, and standing well our hot climate. Same quantity per acre as above. (14 lbs. to bus.) Per lb. 15 cts., 100 lbs. \$12.

FANCY HEAVY RED-TOP GRASS. Free from chaff. Per lb. 30 cts., 100 lbs. \$22.

GRASS SEEDS—continued.

	Per lb.	Per 100 lbs.
Aira cæspitosa. (<i>Hussock Grass.</i>) A coarse grass, preferring stiff and marshy bottoms, and thriving in moist and shady woodlands. In England, door-mats are formed of it by the cottagers. 30 lbs. to the acre	\$0 25	\$20 00
Aira flexuosa. (<i>Wood Hair Grass.</i>) Delights in high and rocky hills; is of little agricultural value, except for sheep pasture. 30 lbs. to the acre.	20	16 00
Alopecurus pratensis. (<i>Meadow Fox-tail Grass.</i>) One of the very best grasses for permanent pasture, and thrives to perfection on lands of an intermediate quality as to moisture and dryness. It also stands the high summer heat without burning. 25 lbs. to acre	35	27 00
Ammophila arenaria. (<i>Beach Grass.</i>) See <i>Calamagrostis arenaria.</i>		
Anthoxanthum odoratum. (<i>True Perennial Sweet Vernal Grass.</i>) For a mixture with pasture grasses, it is valuable on account of its vernal growth, and also for continuing to throw up root foliage until late in the autumn. For meadows its chief merit is its fragrant odor, which the leaves emit when partially dried, thus sweetening hay. It is a vegetable condiment, rather than a grass of much nutritive value. From 2 to 5 lbs. to the acre when mixed with other sorts	60	50 00
Anthoxanthum odoratum puelli. (<i>Annual Sweet Vernal Grass.</i>) Much smaller than the perennial, and of much less value, lasting one year only. 20 to 25 lbs. to the acre.	25	20 00
Avena elatior. (<i>Tall Meadow Oat Grass.</i>) Most valuable for pastures on account of its early and luxuriant growth; it produces an abundant supply of foliage, which is relished by cattle early and late. 50 lbs. to the acre. (13 lbs. to bushel)	25	18 00
Avena flavescens. (<i>Yellow Oat Grass.</i>) Will not thrive well when sown alone, but with other species it becomes desirable for dry meadows and pastures. About 25 lbs. to the acre.	1 00	85 00
Beach Grass. See <i>Calamagrostis arenaria.</i>		
Bermuda Grass. (<i>Cynodon dactylon.</i>) Suitable only to our southern states (where it is very valuable) or the tropics; will not endure frost. On application, we will give further information and quotations for larger quantities; to save time, please state the number of pounds required. Sow 8 to 10 lbs. to the acre	1 00	
Blue Grass, Canada. See <i>Poa compressa.</i>		
“ “ English. See <i>Festuca pratensis.</i>		
“ “ Kentucky. See <i>Poa pratensis.</i>		
Bromus inermis. (<i>Awnless Brome Grass.</i>) A valuable forage plant for light, dry soils; answers for cutting and feeding in green state, for pasture or hay; very productive. About 35 to 40 lbs. to the acre	25	20 00
Bromus mollis. (<i>Soft Chess.</i>) Suited to sandy land, where it is more at home than many grasses of better quality.	20	13 00
Bromus pratensis. (<i>Meadow Brome Grass.</i>) Suitable in mixture for high and dry meadows. 30 lbs. to the acre.	25	20 00
Bromus Schraderi. (<i>Rescue Grass.</i>) Thrives in any soil, but prefers that which is wet or moist. In England four or five green crops are cut in a year, and every time it is cut another crop shoots from the roots. All kinds of stock eat it freely. 30 lbs. to the acre	Per 30 lb. \$0 30	Per 100 lbs. \$25 00
Bromus unioloides. See <i>Bromus Schraderi.</i>		
Calamagrostis arenaria. (<i>Beach Grass.</i>) Valuable on the sandy seashore, canal and railroad banks, etc. It serves, with its tough, wide-spreading and thickly matting roots, to form natural and permanent embankments, preventing the drifting of the sand and protecting from wind and waves. It is of no agricultural value	45	40 00
Ceratochloa unioloides. See <i>Bromus Schraderi.</i>		
Cynosurus cristatus. (<i>Crested Dog's-Tail Grass.</i>) A valuable grass for sheep pastures, on dry, hard soil and hills. It belongs to the family of lawn grasses. 25 lbs. to the acre	35	30 00
ANTHOXANTHUM ODORATUM. (<i>Sweet Vernal Grass.</i>)		

AGROSTIS VULGARIS. (*Red-top Grass.*)

GRASS SEEDS—continued.

		Per lb.	Per 100 lbs
	Dactylis glomerata. (<i>Orchard Grass</i> .) Less exhausting to the soil than Timothy, and will endure considerable shade. It blossoms about the same time as Red Clover, making it on that account a desirable mixture with that plant; it is exceedingly palatable to stock of all kinds, and its powers of enduring the cropping of cattle commend it as one of the very best pasture grasses. 3 bus. to the acre. (14 lbs. to bus.)	\$0 25	\$16 00
	Dog's-Tail. (See <i>Cynosurus cristatus</i> .)		
	Festuca duriuscula. (<i>Hard Fescue</i> .) Not very productive, but it is of a very fine quality, and thrives well in dry situations, where many other grasses would fail, thus making it a desirable pasture variety. 30 lbs. to the acre.	25	16 00
	Festuca elatior. (<i>Tall Fescue</i> .) Succeeds best in moist, alluvial and strong clay soils, and in shady ravines; on moist, rocky sea-coasts is considered one of the most valuable pasture grasses; it is a fortnight later in ripening than <i>F. pratensis</i> . 40 lbs. to the acre.	30	25 00
	Festuca heterophylla. (<i>Various-leaved Fescue</i> .) A very early grass, native of Germany. A valuable sort for permanent meadows and pastures on high grounds. 40 lbs. to the acre.	30	25 00
	Festuca ovina. (<i>Sheep's Fescue</i> .) Grows freely when in high, dry and open pastures. Its chief merit	Per lb.	Per 100 lbs.
	for sheep pasture is that it occupies land which better grasses refuse; grows from six to ten inches high. 35 lbs. to the acre.	\$0 20	\$15 00
	Festuca pratensis. (<i>Meadow Fescue, or English Blue Grass</i> .) A highly valuable species for permanent grass land. It does not, however, attain to its full productive power till the second or third year, when it far exceeds most other sorts in quantity of its produce and nutritive matter. It is relished by live stock, both in hay and pasture, and is one of the most desirable permanent grasses for general culture. 40 lbs. to the acre.	20	15 00
	Festuca rubra. (<i>Red Fescue</i> .) The essential distinction of this Fescue is its creeping roots, which, in dry and sandy soils, are often as strong as those of the common Couch Grass. Well adapted for gravelly banks and dry slopes, which it will protect and cover. 25 lbs. to the acre.	25	20 00
	Festuca tenuifolia. (<i>Slender Fescue</i> .) Flourishes well on dry and sterile soils. It is well suited for large bleaching greens, lawns, etc. 30 lbs. to the acre.	30	25 00
	Fox-tail. See <i>Alopecurus pratensis</i> .		
	Holcus lanatus. (<i>Meadow Soft Grass</i> .) Inferior to many other sorts, but of easy culture, and accommodates itself to all descriptions of soils, producing a fair crop under unfavorable circumstances. 4 bus. to the acre. (7 lbs. to the bus.)	25	20 00
	Hungarian Grass. See <i>Panicum Germanicum</i> .		
	Johnson Grass. See <i>Sorghum Halepense</i> , page 53.		
	Lolium Italicum. (<i>Italian Rye Grass</i> .) One of the most valuable grasses in Europe, being equally suited to all climates. In England it is considered the best known grass to cut green for soiling, affording repeated large and nutritive crops. We recommend it here for use in pasture mixtures. 50 lbs. to the acre.	\$0 15	\$9 00
	Lolium perenne. (<i>English Rye Grass</i> .) Is the staple grass of Great Britain, entering largely into the composition of many of the richest meadows and pastures. Its natural adaptation to almost all cultivated soils, and its early maturity, are the reasons it has hitherto been so extensively cultivated in preference to many other equally nutritious sorts. 60 lbs. to the acre.	15	9 00
	Oat Grass. See <i>Avena elatior</i> .		
	Orchard Grass. See <i>Dactylis glomerata</i> .		
	Phalaris arundinacea. (<i>Reed Canary Grass</i> .) Grows well by the side of rivers, alluvial marshes, ditches, etc. 25 lbs. to the acre.	40	35 00
	Panicum Germanicum. (<i>Hungarian Grass</i> .) One of the most valuable annual soiling plants. It will grow in any ordinary soil, withstands drought well, and in this latitude may be sown as late as the first of July, and yet produce a large green crop. 1½ bus. to the acre. (48 lbs. to bus.) Price variable.		
	Phleum pratense. (<i>Timothy</i> .) A grass so well known needs no description, except that, for a hay crop on moist, peaty or clay soil, it will produce a larger crop than any other sort. It is not so well suited for light, sandy soils. ½ bushel to the acre. (45 lbs. to bus.) Market price.		
	Poa aquatica. (<i>Water Meadow Grass</i> .) This is an excellent pasture grass for very wet situations, where it will serve a useful purpose. 20 lbs. to the acre.	40	35 00
	FESTUCA PRATENSIS.		

DACTYLIS GLOMERATA.
(Orchard Grass.)

GRASS SEEDS—continued.

	Per lb.	Per 100 lbs.
Poa compressa. (<i>Canada Blue Grass.</i>) Differs from the Kentucky variety in its flattened wiry stems. Because of its creeping root-stalks, it forms a fine turf; recommended in all pasture mixtures on dry soils, and thrives well on clay or hard trodden and poor soil	\$0 20	\$15 00
Poa nemoralis. (<i>Wood Meadow Grass.</i>) The early growth of this grass in the spring, and its remarkably fine succulent and nutritive herbage, recommend it strongly for pastures. Thrives well under close feeding, and is very valuable. 30 lbs. to the acre. . .	35	30 00
Poa pratensis. (<i>Kentucky Blue Grass.</i>) It is also known as <i>Green Grass</i> , <i>June Grass</i> , etc., and thrives on a variety of soils, but does best in dry and somewhat shady locations. It requires several years to become well established in the ground as a pasture grass. Very valuable for the southern states, as it will stand the hottest summers. Two bushels to the acre. It is also a most valuable grass for the lawn, for which purpose from three to four bushels of clean seed to the acre should be sown. (14 lbs. to bus.) Fancy cleaned seed	20	12 00
Poa trivialis. (<i>Rough-stalked Meadow Grass.</i>) The superior product of this grass over many other species, its highly nutritive qualities, and the marked partiality which oxen, horses and sheep have for it, are merits which distinguish it as one of the most valuable of those grasses which affect moist, rich soils and sheltered situations. It is a great favorite when used under its proper conditions. 20 lbs. to the acre	30	25 00
Red Top. See <i>Agrostis vulgaris</i> .		
Rescue Grass. See <i>Bromus Schraderi</i> .		
Rhode Island Bent Grass. See <i>Agrostis canina</i> .		
Rye Grass. See <i>Lolium Italicum</i> and <i>Lolium perenne</i> .		
Sweet Vernal Grass. See <i>Anthoxanthum odoratum</i> .		
Timothy. See <i>Phleum pratense</i> .		

LOLIUM ITALICUM.
(Italian Rye Grass.)

See page 48.

CLOVERS.

 Subject to change of price. Our quotations are those ruling at this time.

	Per lb.	Per 100 lbs.
Alfalfa. (<i>Lucerne.</i>) This is the same as Lucerne. It requires a deep, rich soil, and on such will produce several crops every season. 10 to 15 lbs. to the acre	\$0 20	\$13 00
Alsike Clover. (<i>Trifolium hybridum.</i>) Resembles in growth, duration, etc., the Red Clover; thrives well in cold, wet and stiff soils. 10 lbs. to the acre	20	13 00
Bokhara Clover. (<i>Melilotus alba.</i>) A most valuable sort for soiling. It grows from three to five feet high, and if sown in rich soil may be cut three times; lasts two years or more if cut before flowering; good for ensilage and bees. 10 lbs. to the acre	25	20 00
Egyptian Clover. (<i>Trifolium Alexandrinum.</i>) It yields heavily in Egypt, and would likely do well on irrigable land in warm countries. It is as productive as Lucerne, and grows a little taller. 10 lbs. to the acre	Per lb. \$0 35	Per 100 lbs. \$30 00
Scarlet Clover. (<i>Trifolium incarnatum.</i>) An annual, with crimson flowers. Sown late in the summer, it furnishes an early green fodder the following season; largely sown in Virginia. 20 lbs. to the acre	15	6 00
Japan Clover. See Miscellaneous Seeds, page 52.		
Kidney Vetch, or Sand Clover. (<i>Anthyllis vulneraria.</i>) A deep-rooted herbaceous hardy perennial plant, valuable for dry sands and inferior soils, upon which Red Clover will not thrive. Eaten with avidity by sheep, cattle and horses. Useful in mixture for dry soil. Produces abundantly of hay and seed. Sow 20 lbs. of seed per acre.	30	25 00
Large Red, or Pea-Vine Clover. (<i>Trifolium pratense.</i>) The English Cow Grass; for plowing under		
Medium Red Clover. (<i>Trifolium pratense.</i>) Is a perennial, but of very few years' duration; is nutritious and palatable for cattle, sheep and horses; especially valuable in moist locations. 10 lbs. to the acre		
White Clover. (<i>Trifolium repens.</i>) Valuable for lawns and pastures	30	28 00
Yellow Trefoil. (<i>Medicago lupulina.</i>) This may be cultivated either alone or with other grasses. Requires about the same treatment as Clover. 15 lbs. to the acre	20	12 00

SCARLET CLOVER.

STRAWBERRIES.

 If ordered by mail, add 25 cents per 100 to price for postage.

 In the fall we shall have pot-grown plants of these. Price, \$3 per 100.

	Per 100	1,000
Beder Wood. Large, good form and color, moderately firm, fair quality	\$1 00	\$8 00
Bubach. (P.) Fruit large and handsome, roundish conical, bright scarlet, moderately firm	1 00	8 00
Charles Downing. Fruit large, conical, pretty, regular, scarlet; firm, juicy, sweet, rich	1 00	8 00
Crescent. (P.) Medium to large, conical, bright scarlet	1 00	8 00
Cumberland. Very large, ovate conical, regular and uniform; light red	1 00	8 00
Gandy. Large and handsome, roundish conical; uniform in size and shape, bright scarlet; late	1 00	8 00
Haverland. (P.) Large, long, light red; moderately firm; early	1 00	8 00
Lovett Early. Large, round, conical, uniform, bright crimson; quality good	1 00	8 00
Michel Early. Very early; fair quality	1 00	8 00
Parker Earle. A splendid berry; uniformly large, regular, conical, scarlet-crimson	1 00	8 00
Sharpless. One of the largest and best; very hardy	1 00	8 00

BARLEY (48 lbs. to bushel)—		
Champion Vermont. An early and prolific variety.	\$0 10	\$1 25
BUCKWHEAT (48 lbs. to bushel). One bushel to the acre—		
American Silver Hull. Earlier and more productive than the common	15	1 25
Japan. Enormously productive; the grains are much larger than any other variety	15	1 50
OATS, Rural New-Yorker Winter. For late summer and early autumn sowing. Positively hardy, and not to be confounded with many sorts advertised as Winter Oats	15	1 25
Expected also all the approved sorts for spring sowing. Prices on application.		
RYE (56 lbs. to bushel). 1 to 1½ bushels to acre—		
Winter Excelsior	15	1 25
WHEAT (60 lbs. to bushel)—		
Fultz (Bald)	10	1 50
Fife	10	1 50
Lancaster.	10	1 50
Mediterranean Red	10	1 50
Carman No. 1. By parentage, half wheat, half rye. Heads compact, symmetrical, pointed, bearded; brown chaff. Three grains to a spikelet, eight spikelets to a side. Kernels hard, dark amber. Straw very strong. As early as Rye. Very hardy	20	2 50
Carman No. 52. Pure wheat cross. Heads symmetrical, broad; brown chaff, nearly beardless. Medium to ripen. Light amber kernels, four to a breast; nine breasts to a side	25	4 00

MISCELLANEOUS SEEDS, AND SEEDS OF ECONOMICAL PLANTS.

ASPERULA ODORATA. (*Waldmeister*.) This perennial plant, growing about six inches high, bears a small white and very fragrant flower; succeeds in almost any soil. In Germany it is thought much of as imparting a certain bouquet to Rhine wine when compounded with it, making a beverage commonly known as *Maitrank*. Per packet, 10 cents; per oz., 60 cents.

BEANS—Common English Horse Beans. Per lb., 15 cents; per 100 lbs., \$7.

Soja hispida. (*Soja Bean*.) Resembling a bean; the haulm is stiff, and the pods are produced in clusters of from two to five, and contain each four smooth, oval, nankeen-colored seeds. This plant is said to thrive well in hot and dry weather; very valuable for the south, for either man or beast. (About 60 lbs., to the acre.) Per lb., 15 cents; per 100 lbs., \$7.

BROOM CORN—Long-Brush Evergreen. Broom Corn succeeds in a good, deep soil, fresh but not damp; it is very sensitive to cold. Per lb., 15 cts.; per 100 lbs., \$7.

Improved Dwarf. Per lb., 15 cents; per 100 lbs., \$8.

Early Japan. Per lb., 15 cents; per 100 lbs., \$8.

California Golden Long-Brush. Grows from twelve to fourteen feet high. Per lb., 15 cents; per 100 lbs., \$7.

BROOM SCOTCH. (*Genista scoparia*.) The young growth of this shrub is chiefly valuable as food for sheep and other animals in winter. It is also employed for the making of coarse brooms. Per oz., 10 cents; per lb., 50 cents.

BURNET—Common Field. Perennial; makes excellent pasture for sheep; grows on the poorest ground—on dry, sandy or calcareous soil; resists the extremes of heat and cold. Sow in April and again in September, with Sainfoin, Clover, Rye Grass, etc., 30 lbs. to the acre. Per lb., 20 cents; per 100 lbs., \$11.

CAPER TREE. (*Capparis spinosa*.) Per paper, 15 cents; per oz., 60 cents.

CATERPILLARS. A curious plant. Of interest only on account of its curious fruits, from which its name is derived. Much fun is caused by mixing them in salad. Per paper, 5 cents; per oz., 30 cts.

CHICORY—Large-Rooted. A perennial plant, remaining five or six years in the same soil, provided it is cut before flowering. It may be cut four or five times during the same season, and furnishes an excellent green fodder. Sow broadcast in autumn or spring, either alone or with any kind of Clover. Sown in drills, the roots become well developed. When they are dried, roasted and ground, they become the Chicory of commerce, and are used in adulterating coffee. Per oz., 10 cents; per lb., 60 cents.

COTTON—Sea Island. Per lb., 15 cents; per 100 lbs., \$7.

Tennessee Upland. 25 lbs. to the acre. Per lb., 15 cents; per 100 lbs., \$7.

COW PEAS. Adapted to southern localities; also valuable in this latitude as a fodder plant, sheep being very fond of them when in flower; their chief value, however, is as a green crop to plow under. 2 bushels to the acre. Per quart, 20 cents; per bushel, \$2.50 to \$3.

Banana Field, or Cow Peas. (*Dolichos multiflorus*.) Per lb., 20 cents; per bushel, \$5.

CYTISUS PROLIFERUS ALBUS. An African fodder plant, which may prove valuable here. It is recommended to pass the seed through boiling water, and then to steep it in cold water for twenty-four hours before sowing. Per oz., 25 cents; per lb., \$3.

DHOURA—Guinea Corn. See Sorghum.

ESPARTO GRASS. (*Stipa tenacissima*.) This is the true Esparto Grass, extensively grown in Spain and other parts of the Mediterranean countries for making ropes, etc. Per oz., \$1.

ESPARSETTE. See *Onobrychis sativa*.

FENUGREEK. An annual plant, and very fragrant.

The seed is often sought by hostlers to give a temporary fire and vigor to their horses. It is frequently given to oxen and pigs when fattening, causing them to drink and digest their food. Considered to be good for soiling when green. Per oz., 10 cents; per lb., 25 cents.

FLAT PEA. See *Lathyrus sylvestris*.

FLAX SEED. Price variable.

FURZE. (*Ulex Europaea*.) The sprigs of one year's growth of this shrub furnish an excellent green fodder in winter; grows well in sandy soils. Per oz., 10 cents; per lb., 60 cents.

GUINEA GRASS. In some sections this name is applied to the large-seeded Sorghums.

GUIZOTIA OLEIFERA. An annual from Abyssinia, from the seed of which oil is extracted. Per oz., 10 cents; per lb., 50 cents.

HOP SEED. Per packet, 10 cents; per oz., 90 cents.

INDIGO SEED. (*Indigofera tinctoria*.) Per oz., 15 cents; per lb., \$1.25.

IRIS PABULARIA. A forage plant, flourishing in the driest and most arid soil. The seeds should be sown in beds, and the young plants set out ten inches apart each way, where they are to remain, very early the following spring. Per oz., 25 cts.; per lb., \$2.

JAPAN CLOVER. See *Lespedeza striata*.

JERUSALEM CORN. See Sorghum.

JUTE. An annual plant. The fibers of this plant are used for making coarse sacks. It is cultivated extensively in the East Indies, China and Japan, and is now freely sown in our southern states. It thrives in any good corn ground. Sow in drills about eight inches apart, four pounds to the acre. Requires no cultivation, as it will outstrip in growth all weeds. May be also sown broadcast six to seven pounds per acre. Per oz., 10 cents; per lb., 75 cents.

KAFFIR CORN. See Sorghum.

KIDNEY VETCH, or Sand Clover. See Clovers, page 49.

LATHYRUS SYLVESTRIS. (Flat Pea.) A new perennial forage plant, possessing many valuable features. It grows well on very poor unimproved, sandy soil, can withstand pretty severe frosts, roots so deeply that it is not injured by severe drouth, yields superior forage for all farm stock, and has excellent qualities as a fertilizer. Per oz., 30 cents; per lb., \$3.

LENTILS—Best Imported. Succeed best in dry, sandy soil. A leguminous annual, the seeds of which are valuable for pigeons, and are largely used for soups. Per lb., 25 cents.

LESPEDEZA STRIATA. (Japan Clover.) A perennial, growing about twelve inches high, valuable only in southern localities, where it thrives in any soil and in the driest seasons; it makes a fair hay, and stock eat it readily when green. Per lb., 30 cents; per 100 lbs., \$22.

LIQUORICE. (*Glycyrrhiza glabra*.) Seed in pods, per oz., 20 cents.

LOTUS CORNICULATUS. (Bird's-Foot Trefoil.) Perennial, used in pastures. Cattle eat it readily, and it is said to be quite nutritious. Per lb., 50 cents; per 100 lbs., \$40.

LUPINS—Blue. Used for the same purpose as the yellow variety. Per lb., 20 cents; per 100 lbs., \$8.

White. One of the best plants known for soiling. It may be sown from April to July, and plowed under when in flower. The seed when burned is excellent manure for orange and olive trees. Per lb., 20 cents; per 100 lbs., \$9.

Yellow. Less thrifty than the white variety, but still having an advantage over it in remaining green for a longer period. It succeeds well in the poorest soil, and is valuable for plowing in. Per lb., 20 cents; per 100 lbs., \$8.

MISCELLANEOUS SEEDS—continued.

MADDER. (*Rubia tinctoria*.) A perennial plant, the roots of which, when dried and reduced to powder, furnish a red coloring matter. If cut the second year when in flower, it furnishes a good green fodder. Per oz., 10 cents; per lb., 90 cents.

MADIA SATIVA. An annual plant, producing good sheep pasturage; valuable in dry and warm soil. Per oz., 10 cents; per lb., 60 cents.

MILLO MAIZE. See Sorghum, Branching.

ONOBRYCHIS SATIVA. (*Sainfoin*, French; *Esparsette*, German.) A perennial leguminous plant belonging to the same family as Clover and Lucerne; used in France as a forage plant. Requires a calcareous soil. 100 lbs. to the acre. Per lb., 15 cents; per 100 lbs., \$8.

OSAGE ORANGE. (*Machura aurantiaca*.) For hedges. See Hedge Plants, page 44.

PEARL MILLET. (*Penicillaria spicata*.) A valuable fodder plant for the south; is enormously productive. Sow in drills eighteen inches apart, and eight to ten pounds to the acre. Per lb., 20 cents; 100 lbs., \$11.

PEAS—Canadian Field. Valuable for northern climates, for cattle feeding. Per quart, 15 cents; per bushel, \$1.60.

PYRETHRUM ROSEUM. The plant from which insect powder is made in Europe. Per oz., 80 cts.

POPPY—Opium. The seed furnishes about thirty-five per cent. of an agreeable sweet oil, good for eating, painting and illuminating. May be sown in spring either broadcast or in drills, covering with but little earth. Also cultivated for opium. Per oz., 20 cents; per lb., \$1.

POLYGONUM SACHALINENSE. (*Sacaline*.) This hardy perennial plant is a native of the Island of Saghalin, between Japan and Siberia. It has been known to European and American nurserymen for many years, but its merits as a forage plant have only lately been pointed out. It grows well on the poorest soils, is perfectly hardy, and endures the extremes of heat and cold. It grows to a height of ten or twelve feet, and can be cut two or three times in the season. The stems and leaves, which are very nutritious, are said to be eaten either green or dry by cattle and sheep. Seed, per oz., 50 cents; per lb., \$6.

RAMIE—Silver China Grass. (*Urtica nivea*.) Extensively cultivated for its fiber. The seed should be germinated on cotton floating in lukewarm water, and transferred to a bed, screened from the hot sun. When the plants are four inches high, transplant to a field in rows four feet apart each way, and when the plants are three feet high, turn them over and peg to the ground, after which cover them with earth, and they will start in every direction. Per oz., 75 cents; per lb., \$9.

RAPE, Dwarf Essex, English. Per lb., 15 cents; per 100 lbs., \$8.

REANA LUXURIANS. (*Teosinte*.) A valuable fodder plant from Central America, in growth resembling Indian Corn. Well adapted to our southern states. Per oz., 20 cents; per lb., \$1.25.

RIB GRASS. (*Plantago lanceolata*.) Per lb., 20 cents; per 100 lbs., \$14.

SAINFOIN. See *Onobrychis*.

SACALINE. See *Polygonum Sachalinense*.

SCURVY GRASS. (*Cochlearia officinalis*.) Used as a Pepper grass. Per oz., 20 cents.

SERADELLA. A valuable forage plant, admitting of one, and sometimes two cuttings, in one season. It succeeds well in a dry, sandy soil, and furnishes a good pasture for sheep. About fifty pounds to the acre. Per lb., 20 cents; per 100 lbs., \$10.

SNAILS. Used in the same way as Caterpillars. Per paper, 5 cents; per oz., 35 cents.

SPURRY.

SORGHUM—

Early Amber Sugar-Cane. Ripens where Indian Corn matures. Per lb., 15 cents; per 100 lbs., \$6.

Early Orange Sugar-Cane. Ripens about ten days after Early Amber. Per lb., 15 cents; per 100 lbs., \$6.

Brown Dhoura Corn. Per lb., 20 cents; per 100 lbs., \$8.

Yellow Branching. (*Yellow Millo Maize*.) It is non-saccharine; useful only for the large amount of foliage, green feed or cured fodder that it furnishes, and for its grain. Per lb., 20 cents; per 100 lbs., \$8.

White Branching. (*White Millo Maize*.) The merit of this non-saccharine Sorghum is, that when cut for feeding it starts again from the remaining stumps with renewed strength and vigor; thrives in the hottest and driest localities. Per lb., 20 cts.; per 100 lbs., \$8.

Red Kafir Corn, or Sorghum. Non-saccharine. The plant is low, stocky, perfectly erect. The whole stalk, as well as the blades, cures into excellent fodder, and in all stages of its growth is available for green feed. Per lb., 20 cents; per 100 lbs., \$7.

White Kafir Corn. Per lb., 20 cents; per 100 lbs., \$7.

White African Sorghum, African Millet, or White Dhoura. Per lb., 20 cents; per 100 lbs., \$7.

Jerusalem Corn. One of the best and surest for dry countries and seasons. Grows about three feet high, with one large head on main stalk and several smaller heads on side shoots. The grains are white and nearly flat. Per lb., 20 cents; per 100 lbs., \$8.

Halepense. (*Johnson Grass*.) One of the most valuable southern fodder plants. On rich soils it may be cut three or four times in a season. Sow the seed in August and September, at the rate of 25 to 35 lbs. to the acre. Per lb., 20 cents; per 100 lbs., \$10.

SPURRY. (*Spergula arvensis*.) Annual. Grows well on poor, dry, sandy soils. It is in best condition for pasture in 4 to 6 weeks after sowing, and may be sown every month from March to August. Excellent pasture for cattle and sheep; also as a fertilizer for light, sandy soil. 15 lbs. to the acre. Per lb., 20 cents; 6 lbs. for \$1; 10 lbs. for \$1.40; 50 lbs. and upwards, @ 10 cents per lb.; 100 lbs., \$8.

SUNFLOWER—Large Russian. Per lb., 10 cts.; per 100 lbs., \$5.50.

MISCELLANEOUS SEEDS—continued.

SPRING VETCHES.

TEASELS—Fuller's. The heads, furnished with barbed spikes, are used for combing cloth. Teasels require a good, deep soil, and should be sown about April or May. The young leaves are often used for feeding silkworms. Per lb., 25 cents.

TEOSINTE. See *Reana luxurians*.

TOBACCO SEED—Brazilian American. The finest Brazilian strain grown here; makes excellent cigars and delightful, aromatic pipe-smoking tobacco. Per oz., 30 cents; per lb., \$3.

Climax. A cross between Burley and Sterling. Extra fine, bright variety. Per oz., 30 cents; per lb., \$3.

Connecticut Seed-Leaf. The popular sort, used for cigar wrappers. Per oz., 25 cents; per lb., \$2.

Conqueror. A superb, bright yellow, and a healthy, vigorous grower of the best form and finest texture. It ripens early, and is easily cured to the brightest color. Per oz., 30 cents; per lb., \$3.

Havana. Seed gathered for us from the celebrated plantations of the "Vuelto de Abajo." Per oz., 40 cents; per lb., \$4.

Honduras. A new mahogany variety, producing the very highest quality of tobacco of this type. A healthy and vigorous grower. Per oz., 30 cents; per lb., \$3.

Kentucky Burley. Per oz., 30 cents; per lb., \$3.

TOBACCO SEED, continued.

Kentucky Yellow. Per oz., 25 cents; per lb., \$2.

Oronoka, Yellow. A reliable old yellow variety, grown for more than fifty years, and improved with reference to the production of yellow stock. Per oz., 25 cents; per lb., \$2.

Oronoka, White-Stem. From the Yellow Oronoka, which it resembles. Per oz., 25 cents; per lb., \$2.

Pennsylvania Seed-Leaf. Newest and best strain of this standard variety, of which more is sold and planted than of all others of the cigar kind combined. Per oz., 25 cents; per lb., \$2.

Persian Rose. Finer than the Muscatel, and may be relied upon to make the best cigar. Per oz., 30 cents; per lb., \$3.

Pryor, Yellow. Preferred by many for brights, and succeeds where the other yellow sorts fail. The west is giving it preference. Per oz., 25 cents; per lb., \$2.

Pryor, Blue. The genuine James River favorite. Per oz., 25 cents; per lb., \$2.

Safrano. Of a rich, saffron-yellow color, and possessing a soft, silky texture and a delightful flavor. Per oz., 30 cents; per lb., \$3.

Sterling. The newest and brightest of the yellow type, and the earliest to ripen. Per oz., 25 cents; per lb., \$2.

Tennessee Red. Excellent for dark strips and wrappers. Per oz., 25 cents; per lb., \$2.

Tuckahoe. Preferable to most of the older varieties for possessing more body. Leaf long and extra fine; the perfection of a wrapper. Per oz., 25 cents; per lb., \$2.

Virginia Oak Hill Yellow. Resembles White Burley in color, and Oronoka in shape and habit. Unsurpassed in delicacy of fiber. Per oz., 30 cts.; per lb., \$3.

Yellow Mammoth. A new western variety of the export type. Per oz., 25 cents; per lb., \$2.

VETCHES—Spring. (*Vicia sativa*.) Sown broadcast at rate of 1 to 1½ bushels to the acre like wheat or barley, and sometimes mixed with oats for soiling. Used in France and Canada as a substitute for peas. Also ground up into flour, after which it is mixed with wheat flour for making bread. A valuable plant. Per qt., 20 cents; per bus., \$2.75.

Sand, Winter or Hairy Vetch. (*Vicia villosa*.) This variety thrives on poor, arid, sandy soils. It is sown either in fall or in spring, and generally mixed with rye, which serves as a support to the plants. It grows to a height of from three to four feet, and can be cut twice for fodder, first as soon as the bloom appears, and then it can be again cut for the seed. The plant is perfectly hardy, and the produce is recommended as most nutritious. The seed is black and perfectly round, and should be sown at the rate of 1½ bushels to the acre. Per qt., 30 cents; per bus., \$5.

Tufted Vetch or Bird's Tares. (*Vicia cracca*.) Has creeping perennial roots, and affords provender of good quality. Per lb., 25 cents.

WILD RICE. (*Zizania aquatica*.) A native of our northern and western states. Valuable as a forage plant for swamps and inundated lands. The Indians of the lake regions of the northwest used to gather it by beating it off into their canoes and then cure it for winter food. Before sowing, put the rice in coarse cotton bags, and sink them in water for twenty-four hours. Sow in water which is from six inches to five feet deep, with soft mud bottom, or on low, marshy places which are covered with water the year round. In running water, sow as much out of the current as possible. Per lb. 25 cents; per 100 lbs., \$15.

WORMS. Used the same as Snails and Caterpillars. Per pkt., 5 cents; per oz., 35 cents.

Galvanized Wire Tomato Support.

NOT IN USE.

It is made of galvanized wire, that will not rust or rot out. It is easily set, and the legs being double, the greater the pressure the firmer the support. It takes up no room in the winter, as it may simply be hung on a peg till wanted again next year. It is the simplest, strongest, most durable, most easily operated and cheapest support we have seen. Price, each, 15 cts. ; per doz., \$1.40.

LAWN-MOWERS.

THE NEW MODEL.

NEW MODEL LAWN-MOWER.

The manufacturer says: "The New Model combines every improvement that nearly a score of years of experience as Lawn-Mower manufacturers can suggest or mechanical skill devise. For simplicity, durability and quality of work, it is unequalled, while for lightness of draft it excels by a large percentage any other Lawn-Mower made. A most thorough trial is solicited." The latest and best Lawn-Mower, and will give entire satisfaction.

EXCELSIOR ROLLER LAWN-MOWER.

The accompanying cut represents the Roller Mower, which has been greatly reduced in weight and draft, and is without doubt the lightest running Roller Mower made. The gears are perfectly covered, and the grass and dirt are entirely excluded. The Roller Mower does the most perfect work, and also a greater variety of work than other styles of Mowers. The Roller serves to roll down the imperfections in the lawn, such as ant-hills and small upheavals by frost.

FIELD AND GARDEN ROLLERS.

SYRINGES, PUMPS, ETC.

NO. 6.

NO. 1, \$2.25.

Ladies' Syringe, with One Spray Rose. Length of barrel, 12½ inches; diameter, 1 5-16 inches.

NO. 2, \$3.75.

Ladies' Syringe, with Jet and Two Spray Roses; the two roses when not in use are screwed on the sides of the barrel. Length of barrel, 14½ inches; diameter, 1 5-16 inches.

NO. 3, \$5.50.

Best Plate Valve Syringe, large size, with One Stream and Two Spray Roses, with side pieces on barrel. Length of barrel, 18 inches; diameter, 1½ inches.

NO. 4, \$6.

Best Conical Valve Syringe, large size, with One Stream and Two Spray Roses, which are placed, when not in use, in the handle of syringe. The handle is strongly mounted with a solid brass cap and ring. When the finest spray is used the water should be very clean. Length of barrel, 18 inches; diameter, 1½ inches.

NO. 6, \$7.

Best Conical Valve Syringe, large size, with One Spray Rose and Gooseneck Angle Joint, turning in all directions, for washing the under surface of the leaves of plants and flowers, cleansing them from insects, etc. Length of barrel, 18 inches; diameter, 1½ inches.

ECLIPSE COMBINED SYRINGE AND FORCE PUMP.

RUBBER SPRINKLER. \$1.

RUBBER SPRINKLER.
ANGLE-NECK. \$1.

The Eclipse Combined Syringe and Force Pump. This is an excellent combination, easily worked and very powerful, throwing a continuous stream for 50 feet with as little exertion as is required for the smallest syringe. By means of the hose attached, water, etc., may be drawn from a tank or stream, thus insuring a continuous flow. With the elbow joint attached, it is the most perfect apparatus for cleaning the under surface of leaves, etc. With 4 feet of hose, complete, \$6; fixed elbow joint, 75 cts.

Scollay's Rubber Sprinkler. For florists' use and window gardening. \$1.

" **Angle-Neck Rubber Sprinkler.** \$1.

Atlas Rubber Sprinkler. 75 cts.

Woodason's Atomizer. For the application of all liquid insecticides, \$2.

NO. 3.

Myers' Bucket Brass Spray Pump,

With Agitator, complete with Hose, Combination
Fine and Coarse Spray and Solid Stream Nozzle.

This Spray Pump is constructed of brass, and is not affected by the poisonous arsenites used for spraying. It is arranged so that the heavy work is done on the down stroke of the plunger and nothing on the up stroke. It is thus very easy to operate, and has extraordinary power. It will throw a solid stream 50 feet, and is of unusual value for washing windows, etc. For spraying, it is arranged so that it discharges a fine jet in bottom of bucket to keep the solution thoroughly mixed and agitated. The pump is provided with a combination nozzle, and also with a sprinkler for flowers, and will throw a spray as fine as mist or as coarse as required. For spraying large trees, an 8-foot pipe extension is supplied for 60 cents extra. (See cut, page 58.) Price, complete, \$4.50.

THE "PLANET JR." SEED DRILLS AND WHEEL HOES.

The "Planet Jr." Hill-Dropping Seed Drill.

It holds two quarts, has force feed, and sows and covers any depth desired, but its distinctive feature is that it will not only sow in Drills but also in Hills 4, 6, 8 or 12 inches apart. **Price, \$10.**

The "Planet Jr." Seed and Fertilizer Drill Combined.

Does all that the above tool does, and in addition sows Fertilizer in either Drills or Hills, and in any quantity, either above or below the seed. The Fertilizer hopper holds one peck. It is a perfect combination for market gardeners and onion and berry growers. **Price, \$14.**

PLANET JR.
COMBINED
DRILL.

The "Planet Jr." Combined Drill.

Unquestionably the most popular and perfect machine of its kind made. Has a Seed Drill, and is the same as the No. 2, except in size; holds one quart. The rakes are invaluable in preparing the ground for planting, cultivating, etc. The hoes work closely and safely all rows up to 16 inches wide at one passage. The plow opens furrows, covers them, hills,

plows to and from; the cultivator teeth mellow the soil, etc. **Price, \$9.00.**

The "Planet Jr." No. 2 Drill.

It holds two and one-half quarts. Sows all garden seeds accurately in any desired thickness or depth; opens, drops, covers, rolls down and marks the next row, all at one passage. It is especially good for sowing difficult seeds, such as carrot, parsnip, beet and salsify, and delicate seeds like cabbage. **Price, \$6.50.**

The "Planet Jr." Double-wheel Hoe.

It can be used straddle of the rows or between the rows, as desired. The rakes level the ground for planting, cultivating, cover seed, etc. The hoes cut close and clean, killing everything they meet. The cultivator teeth mellow the soil deep or shallow. The plows lay out deep furrows and cover them, hill up or plow away, as desired. The leaf guards allow cultivation of large plants, such as beets, carrots, parsnips, beans and peas. **Price, complete, \$6. Price, plain (one pair of hoes only), \$3.50.**

The Fire-Fly Single-wheel Hoe.

Great strength, easy running, simple combinations, and variety of attachments; are striking features of this favorite. **Price, \$3.75.**

PLANT PROTECTING CLOTH.

PLANT PROTECTING CLOTH.

This cloth is useful for protecting plants from frosts, and for covering hot-beds and frames instead of glass. It is specially prepared to prevent mildewing and rotting.

Light grade, per yard, 6 cts;	per piece of 68 yards, \$2 50
Medium grade, " 10 cts;	" 62 " 4 25
Heavy grade, " 12 cts;	" 40 " 4 50

COLUMBIA FLOWER TUBS.

The Tubs are made of the best cypress timber, which will keep for years without rotting. They are made of twelve staves, in tapered shape, held together by two heavy steel wires, which are connected with substantial iron handles, and are so arranged that the wire can be tightened or loosened by simply turning nut on handle.

Natural Varnish finish on the wood :

FERTILIZERS.

These Fertilizers are specially manufactured for us, and are reliable and efficient for the purposes specified. Bone basis guaranteed. Great care should be taken that all Fertilizers are well incorporated with the soil, so as not to come in contact with and destroy the vitality of the seed sown.

THORBURN'S COMPLETE MANURE.

Guaranteed to contain ammonia, 3 to 3½ per cent.; phosphoric acid, all soluble, 8 to 10 per cent.; sulphate of potash, 7 to 7½ per cent.; sulphate of magnesia, soda, lime, sulphuric acid, etc.

Adapted for use on all crops, such as corn, tomatoes, potatoes, peas, beans and early vegetables, and is especially suited for grain crops and for seeding down grass.

Price—In 167-lb bags, per ton, \$35; single bags of 167 lbs., \$3.50; per bag of 75 lbs., \$2; 50 lbs., \$1.50; 25 lbs., \$1; 10 lbs., 50 cents.

THORBURN'S POTATO MANURE.

Guaranteed to contain ammonia, 4½ to 5 per cent.; phosphoric acid, all soluble, 7 to 9 per cent.; actual potash, 9 to 10 per cent.; sulphate of magnesia, soda, lime, sulphuric acid, etc.

This manure is for special use on the potato crop, and is also adapted for sweet potatoes, vines and fruit rees, and all leguminous plants.

Price—In 167-lb. bags, per ton, \$43; single bags of 167 lbs., \$4; per bag of 75 lbs., \$2.50; 50 lbs., \$1.75; 25 lbs., \$1; 10 lbs., 50 cents.

THORBURN'S LAWN FERTILIZER.

Guaranteed to contain ammonia, 5 to 6 per cent.; phosphoric acid, all soluble, 5½ to 7 per cent.; actual potash, 7½ to 8½ per cent.; lime, sulphate of magnesia, soda, sulphuric acid, etc.

Specially prepared for lawns and meadows as a top dressing, imparting to grass a rich green color and vigorous growth.

Price—In 167-lb. bags, per ton, \$43; single bags of 167 lbs., \$4; per bag of 75 lbs., \$2.50; 50 lbs., \$1.75; 25 lbs., \$1; 10 lbs., 50 cents.

 Quantity required per acre on soils not impoverished, about one-half ton.

OTHER FERTILIZERS.

Ground Bone Meal. Very finely powdered 5 lbs., 25 cts.; 50 lbs., \$1.25; 100 lbs., \$2; per ton, \$32.

" " No. 3. Coarser than the above per 100 lbs., \$2.50; per ton, \$38.

Crashed, or Coarse Bone per 100 lbs., \$2.75; per ton, \$43.

Sheep Manure Pulverized. Good for lawns. 5 lbs., 30c.; 25 lbs., \$1.25; 50 lbs., \$2; 100-lb. bag, \$3; ton, \$40.

Bowker's Ammoniated Food for Flowers. Small packages, 15 cts. each; large packages, 25 cts. each.

INSECTICIDES. (INSECT DESTROYERS.)

Copperdine. A remedy for grape anthrax and mildew, pear-leaf blight, pear and apple scab, celery, carnation and violet rust. Mix 100 parts water to 1 part of Copperdine. In gallon jugs, \$1.50 each.

Fir-Tree Oil. Destroys all plant insects without injuring the plant. Dilute in the proportion of one pint to twenty gallons of water. ½ pt., 40 cts.; pt., 75 cts.; qt., \$1.25; ½ gal., \$2.25; gal., \$4.

Fir-Tree Oil Soap. ½-lb. tin, 25 cts.; 2-lb. tin, 75 cts.; 5-lb. tin, \$1.75.

Dalmatian Insect Powder. Per ½-lb. box, 30 cts.; per 1-lb. box, 45 cts.

Gishurst's Compound. A certain remedy for greenfly, scale, mealy bug, etc. Excellent for greenhouse use. Full directions for use on each box. Per lb. box, 50 cts.

Hammond's Grape Dust. For the prevention of mildew on roses, grapes, gooseberries, etc. It is not only a preventive, but it cures plants already affected. Apply with bellows. 5-lb. package, 35 cts.; 10-lb. package, 60 cts.; 100-lb. keg, \$5.

Hellebore, Powdered. An excellent protection from currant worms, grape slugs, etc. May be applied dry by dusting on with bellows, or as a liquid mixed at the rate of 1 lb. to 30 gallons of water. Per lb. box, 30c.; ½-lb. box, 20 cents; ¼-lb. box, 15 cents.

Paris Green, New Process. Mixed at the rate of 1 lb. to 200 gallons of water, it will prove effective against all chewing insects. Per 1-lb. can, 35 cents; ½-lb. can, 20 cents; ¼-lb. can, 15 cents.

Little's Antipest. A sure destroyer of all insect pests. It is non-poisonous and harmless to vegetation. Mixed with water in the following proportions, it is effectual against—greenfly, 1 pt. to 10 gallons of water; mealy bug, 1 pt. to 1½ gallons; red spider, 1 pt. to 2 gallons; ants, wireworms and slugs, 1 pt. to 1 gallon. ½-gal. can, \$1.50; gal. can, \$2.50.

London Purple. As destructive to insects as the Paris Green, and is more easily dissolved. Per lb. 25 cts.

Slug Shot (Hammond's). Excellent for destroying cabbage, turnip and beet fly, potato bugs, currant worms, etc. Prepared ready for use. 5-lb. package, 30 cents; 10-lb. package, 50 cents; 100 lbs., \$4.

Sulphur, Powdered. Valuable for protecting against mildew on grapes, roses, etc. Per lb., 10 cents; 10 lbs., 60 cents; 100 lbs \$4.

Sulpho-Tobacco Soap. Dissolve in proportion of 2 ounces to a gallon of water, and apply with a syringe or atomizer. It will destroy rose-slugs, aphides, greenfly, bark-lice, etc. Per ½-lb. tin, 25 cents.

Tobacco Dust. If dusted on *while the foliage is moist* it destroys rose-lice, cabbage and turnip fleas, etc. Spread upon the ground it keeps off all earth insects, and also acts as an excellent fertilizer. Per 1-lb. box, 10 cts.; 5-lb. package, 30 cts.; 10-lb. package, 50 cts.; per 100 lbs., \$2.50.

Tobacco Stems. For fumigating plants infested with greenfly. Per bale of about 100 lbs, \$1.50; per bale of about 200 lbs. \$2.75; per bale of about 400 lbs. \$4.50.

Tobacco Extract. A powerful extract of Tobacco, for destroying lice, red spider, mealy bugs, etc. For SYRINGING, dilute ten times with water. For greenhouses, diluted half and half with water and evaporated from pans, adding water from time to time as it thickens, it will check the development of plant lice on Roses or Chrysanthemums. It is necessary that sufficient vapor be thrown out to fill the house. Per ¼ pt. 25c.; pt. 40 cts.; qt. 60 cts.; gal. \$1.50.

Whale-Oil Soap. For washing trees and destroying all insects on the bark. Mixed at the rate of 1 lb. to 4 gallons of water, it will rid cabbage, rose bushes, peach trees, etc., of the aphides that so often infest them. Per 1-lb. box, 18 cts.; 2-lb. box, 30 cts.; 5 lbs., 70 cts.; 10 lbs., \$1; 20 lbs. \$1.75; 100-lb. keg, \$7.

Bordeaux Mixture. For all fungoid diseases, such as mildew and the various rots of the grape. It prevents potato rot, downy mildew, anthracnose of grape, peach, pear and cherry blight. This mixture is scientifically prepared, so that by adding water at the rate of 50 gallons to one gallon of the mixture, and stirring, it is ready for use. Per qt. 50 cts.; per gal. can, \$1.

TREE AND SHRUB SEEDS.

HOW TO GROW THEM.

In order to preserve seeds of CONIFERS and other EVERGREEN TREES, it is best to keep them in perfectly dry sand until the time of sowing. For this latitude, the seeds should be sown thinly, as early in the spring as the ground can be worked, in beds of fine, sandy loam. Cover to the depth of about the thickness of the seed, and press the beds gently with the back of the spade to firm the earth around the seeds. Great care must be taken not to give too much water, as the young plants damp off very easily. Water with a very fine rose, but never so that the ground becomes *soggy*. Some shade must be used to protect the young plants from the hot, drying sun and winds, and also to keep the birds from destroying them. Seeds of the rarer sorts may be sown in coldframes or boxes; if in coldframes the sashes should be shaded and the frames raised at the corners three or four inches to allow the air to circulate freely. Keep the young plants well weeded, and allow them to remain from one to two years before transplanting.

PICEA DOUGLASII.

The propagation of DECIDUOUS TREES from seeds is less difficult than that of Evergreen species, a little attention only being required to sow at the proper season to insure success. ACORNS, HICKORY NUTS, CHESTNUTS and WALNUTS should be planted in autumn, or kept during the winter in sand or moss. They shrivel up by too long exposure to the air, and many of them lose their power of vegetating. Those seeds with hard shells, like the LOCUST, GYMNOCLADUS, etc., should be planted in autumn or placed in boxes with sand, and exposed to frost before planting. They may not vegetate till the second year after planting, but if these seeds are received too late in the spring to expose them to the action of the frost, they may be put into a vessel of hot water for an hour or so before planting. AMERICAN ELM, SILVER MAPLE, and a few other sorts ripen their seeds early in summer, and if gathered and planted soon after they fall from the tree, will make fine plants the same season. The seeds of other DECIDUOUS TREES and SHRUBS should be planted from the middle of April to the middle of May, in drills about two feet apart and covered about half an inch in depth, according to size.

Evergreen Tree Seeds.

We do not sell Tree or Shrub Seeds in quantities of less than an ounce of any one variety except those quoted at over 25 cents per ounce; of these, 25-cent packets may be ordered.

Under the new nomenclature some species formerly attached to ABIES have been placed under PICEA, which see.

FLOWER SEEDS.

PRACTICAL DIRECTIONS FOR CULTURE, TREATMENT, ETC.

HARDY ANNUALS (hA).—Sow in April or May, according to the latitude, in shallow boxes or pots

CYCLAMEN PERSICUM GIGANTEUM.

placed in a warm window, a hotbed, or, if possible, in a greenhouse. A second sowing ought to be made from two to four weeks after, for a succession, as well as to provide against failure the first time. For sowing seeds in, there is nothing better than shallow boxes from two to three inches deep, and of any convenient size. The most suitable soil in which to sow seeds of all the smaller kinds is a very fine, rich, sandy loam; if some fine charcoal can be mixed with it, it will be beneficial. The soil from old hotbeds is excellent, or sods from an old pasture, piled up and allowed to rot for two or three years, and then mixed with a little old stable-manure and sand. The selection of a proper soil in which to sow fine seeds is very important, as upon this depends the success or failure of them. After the seeds are up, care must be taken to give them plenty of air and moisture, and yet not too much water, or they will "damp off." When the young plants are well out of the seed-leaf, they must be transplanted to new boxes. If pots two inches or more in diameter can be had, set out from three to a dozen or more of the young seedlings along the edges of the pot, so that as soon as the ground is warm enough they may be easily turned out and planted singly, as by that time they will have made good roots. Where the pots cannot be had, boxes, tin cans, etc., may be substituted; or a cheap and effective plan is to take out the inside of a potato or turnip, leaving a shell half an inch thick. After filling these with the compost above referred to, set out the seedlings in them, and place the whole in boxes, filling in the spaces between the potatoes or turnips with soil. When the plants are ready to set in the open ground, it is an easy matter to transplant them, and as the decay of the turnips or potatoes affords nourishment to the young plants, a double purpose is served in using them. Treated in this way, the seedlings receive no check in growth, and require none of the extra care in watering or shading necessary with other methods.

A common mistake in sowing flower as well as other seeds, is in covering too deep. As a general rule, cover only to the depth of the thickness of the seeds, or with medium-sized seeds, like Balsams, Zinnias, etc., a half an inch or so is none too much. Such fine seeds as Portulacas need only to be pressed into the soil with a piece of board or the palm of the hand. Always press the earth down firmly after sowing all flower seeds, else there is danger of their drying up before the roots can get firm hold of the soil. Seeds of the hardier Annuals may be sown where they are to grow; but as a rule it is preferable to transplant, as the plants are generally stronger and stand the drought better. During very dry weather, and when the seedlings are first set out, they should be watered frequently. Provide some support for all such Annuals as require it, else the plants become weak and straggling, and do not make the show they otherwise would.

The weeds should be kept down and the ground loosened often, so that the plants will receive the full benefit of the rains and dews, which they will not if the ground is allowed to become hard and baked.

Seeds of Biennials and some hardy Annuals may be sown in September in boxes, and placed in cold-frames. They will make strong plants by spring, and come into flower early. Do not put on the sashes until heavy rains and frost render this necessary, and then always remove during the day, and whenever the temperature is above freezing in winter.

HARDY BIENNIALS (hB) and PERENNIALS (hP).—These require the same treatment as the Hardy Annuals. In addition to the above, both Hardy Biennials and Perennials may be sown in the open border in September; for if not sown until spring, the seeds of many Perennials require two years before they

germinate. In this case it is a good plan, at the commencement of frost, to cover them lightly with straw, leaves, or any dry litter, in order to afford some protection from the extreme severity of the winter. As soon as the frost is out in the spring, remove the covering and loosen the surface around the plants, which, when large enough, may then be transplanted to the flower garden where they are to remain.

HALF-HARDY ANNUALS (hhA). These may be sown in shallow boxes, pots, or a hotbed, as directed for Hardy Annuals. They may be sown thus at any time after the middle of April, as the hotbed will be sufficient protection; but it is best to cover the glass with a mat or straw at night until danger of frost is past. In the day give all the air possible by partly or wholly removing the lights. After the end of May sow in the border, like Hardy Annuals.

HALF-HARDY BIENNIALS (hhB) and HALF-HARDY PERENNIALS (hhP) require the same treatment. Though plants and their bloom are greatly forwarded by sowing the seeds early in boxes under cover, it may be stated that nearly all kinds of hardy and half-hardy flower seeds may be sown in the open border in a warm and sunny spot, as soon as the soil has become dry and warm; so that those who have no glass frames or greenhouses need not be without flowers. They can have them, but it will be later.

TENDER ANNUALS, BIENNIALS and PERENNIALS.—The best method to obtain an early bloom of the Tender Annuals (tA), and to insure strength to the plants, is to sow the seeds in boxes or pots in March, placing them in a warm greenhouse, or plunging in a moderate hotbed, carefully protecting them from the cold, shading from the mid-day sun, and watering with a fine rose. The seed should be sown in very light, sandy compost, and the pots well drained by placing broken pots or bits of sods in the bottom. The finer seeds must not be covered more than an *eighth of an inch deep*, and the soil pressed down closely over them. Water frequently, particularly if the house or hotbed is very warm. As soon as the plants are out of the seed-leaf, transplant into shallow boxes or small pots, and when they have acquired sufficient strength transplant into the flower beds; not, however, before the middle of May.

GREENHOUSE SEEDS (g) should be sown as directed for Tender Annuals, in pans, pots or shallow boxes, and be kept in the house, carefully watched, slightly watered occasionally, and sheltered from the hot sun till strong enough to transplant. Most varieties may be sown at any season of the year.

The smaller seeds of Greenhouse Plants are sometimes difficult to germinate, unless great care be taken in the mode of sowing. Hence the supposition is produced that the seed itself is not good, whereas the fault is not in the seed, but in the treatment. Fine seeds of this description should be sown in leaf-mould or peat, with some fine sand added to it; press firmly down in the seed-pan or pot, and make perfectly level at the top, so that the mould may not afterward sink materially with watering. Sow the seed very thin, and cover *very lightly* with a little compost, or with silver sand. Success is more certain if a pane of glass is placed over the pan or box till the plants have appeared, when it should be removed. By this method the difficulty of starting fine seeds will be removed. As soon as the young plants have two leaves, they should be transplanted into similar compost in another pan or box. To do this, do not pull them out of the seed-pan, but break up the soil by running a stick or trowel under it, when the plants can be taken out with good roots. After transplanting they should be kept in a shady part of the greenhouse for a few days, until they are somewhat established in the new soil.

There are many minute plants from the finer seeds killed by drenching with water while very young. One way to avoid this is to give the water by dipping a clothes-brush in water, shaking off the greater part of the water from the brush, and then (holding the brush over the seed-pan) drawing the hand over the bristles several times, which will cause the water to be thrown on the young plants almost like dew. Some of the vaporizers and atomizers (as used for perfumes) now in use are admirably adapted for watering tender young plants. In the first stage of their existence, plants require moisture in a minute quantity, often repeated, and not in such large quantities as to saturate the soil in which they are growing.

PRIMULA SINENSIS.—The Chinese Primrose is deservedly one of our most popular winter-blooming plants. For winter use, it is easily raised from good seed, if sown at the right time and properly treated. Sow the seed in drills, in a light, rich soil, in shallow boxes, at any time from the middle of March to the middle of May; the earliest sown seed will naturally produce the earliest bloom. Cover the seeds about an eighth of an inch, and press the soil on them with a board or the bottom of a pot. Water moderately, avoid forcing the seed and keep the young plants away from drip. The boxes may be placed in the greenhouse, or out of doors in a frame. As soon as the plants are well out of the seed-leaf, transplant them singly into two or two-and-a-half inch pots, using a light, rich soil. The object now is to make good, stocky plants, and they must therefore be repotted as often as the pots become tolerably filled with roots, until they are in five or six-inch pots, when they may be allowed to flower. Previous to this, any flower stalks that appear must be pinched out. In a suitable place the plants will do better out of doors than in the greenhouse during summer. They need a liberal supply of water. The plants will bloom continuously during the winter in either the greenhouse or a well-lighted sitting room, not too warm.

CINERARIA.—Years ago the Cineraria was a popular plant among florists. Bedding plants crowded it aside, but it is now fast taking its proper place again among choice winter-blooming plants. It is, to be sure, a rather difficult plant to grow and bloom well if its requirements are not understood. The mistake generally made is in growing it in a warm house instead of a cool one. The seed should be started in the greenhouse. For winter blooming, sow the seed in April and May, in shallow boxes, in fine soil; drop the seed in shallow drills, cover, and press the earth rather firmly with a piece of board or the bottom of a pot. Set the box where it will get the morning sun, but be free from drip; water moderately and carefully. The treatment of the seedlings should be similar to that given to the Chinese Primrose. As soon as the plants are out of the seed-

leaf, transplant singly into small pots, in a rich soil with some vegetable mould in it. Repot as often as the pots become moderately filled with roots, or sufficiently often to prevent the roots from becoming pot-bound, and so avoid checking the growth. If specimen plants are wanted, the repotting should be continued till the plants are in pots from eight to ten inches in diameter. The last two pottings should be liberal ones, and drainage well provided for, as the plants will need copious waterings. When the flower stalks appear, manure water may be used once or twice a week. Aphis and red spider are the chief enemies to be guarded against; and this is best done by frequent syringings or sprinklings overhead. The plants will do best during the summer out of doors, in some place where they will not get too much sun, and be free from the drip of trees. In the fall the plants should be placed in a cool greenhouse, where the temperature can be kept low and the air moist. The plants should be placed on a table by themselves, and the pots *always* kept far enough apart to prevent the leaves in one pot from touching those in the next. In the winter it may be necessary to smoke the plants with tobacco occasionally, to keep down the "green fly," or aphid; this may easily be done.

PANSIES.

CALCEOLARIA.—The herbaceous varieties of the Calceolaria are very beautiful and popular plants. They should be flowered in a cool greenhouse. The seeds are very small, and should be sown on the surface. Sow in shallow boxes, filled with a light, sandy soil that has been sifted. Sow moderately thick in rows on the surface, and cover very lightly with sifted sphagnum moss, coconut waste or very light soil. Press the soil firmly on the seed. The watering should be done carefully; an atomizer or brush may be used to advantage. To retain the moisture, the box may be covered with panes of glass, which must be removed, however, as soon as the plants make their appearance. The box should have plenty of light, but not much sun. As soon as the plants can be handled, transplant singly into pots two to two-and-a-half inches in diameter. The soil should be light and rich, and vegetable mould is an excellent addition. Repot as often as the pots are fairly filled with roots, and continue the repotting, if fine flowers are wanted, till the plants are in pots eight inches in diameter. If the pots become root-bound the plants are apt to run prematurely into flower. Water regularly and abundantly to prevent drooping. As the pots increase in size, drainage must be supplied to carry off the surplus water. Place in a cool greenhouse in the winter, as directed for Cinerarias, and keep the pots apart to prevent the leaves from touching. An occasional smoking with tobacco will keep down the green fly.

PANSY.—For spring blooming, the seed should be sown in August, September and October, in a coldframe with a southern aspect. Plenty of air and light are essential. During mild weather the sashes should be removed; when it is frosty, coverings are preferable to artificial heat. If wanted for winter bloom, sow in July, and as soon as large enough plant on beds or benches near the glass in the greenhouse, in a low and even temperature.

GERANIUMS.—The Scarlet or Horseshoe Geranium (or, more properly, Pelargonium), now so extensively used for bedding, may be easily grown from seed at any season of the year. If during the summer, better out of doors than anywhere else; but in a greenhouse or sitting-room during the winter. Sow the seed in pots or shallow boxes, in any common soil; cover about an eighth of an inch, and press the soil on the seed. Transplant as soon as out of the seed-leaf, in small pots, in a soil only moderately rich; or, if the seeds were started out of doors, the plants may be put in the border. Seed sown in-doors in the fall or early winter, and the plants grown in the greenhouse, will show flowers in June or July, while plants from those sown in March or later will not come into flower till August and September, and some even later. Much, however, depends upon the treatment, those receiving special care in pots blooming much sooner than those turned into a border or bed.

PETUNIAS.—Fill shallow boxes with fine, light soil, say an even mixture of leaf-mould and sand, and wet thoroughly by pouring on boiling water, which kills insects and heats the soil. When the soil has cooled sufficiently but is still warm, sow the seeds very thinly in the boxes, so that the plants may be one inch apart; cover seeds very slightly with a little sifted sand, and place slate or glass on top of the boxes. If the white root-points of germination appear before the leaves, sift on more sand and replace slate, and watch closely. When the small leaves appear, remove slate and give plenty of light, to produce strong, stocky plants. The soil may now need water, which should be applied very gently, that the tiny seedlings may not be displaced. Later the larger plants may be transplanted from seed boxes into other boxes or pots. As the weakest plants frequently give the finest blossoms, care should be taken to preserve every plant until the blossoms appear.

EXPLANATION OF THE FLOWER SEED CATALOGUE.

We have endeavored to make our flower seed department as complete in detail and easy of reference as possible, and instead of the usual description, have adopted a system of classification in columns, using simple abbreviations to denote the various characteristics of the varieties in regard to color, time of flowering, hardiness, etc.

The **first column** gives the **NUMBER**, by which the different varieties may be ordered, without writing out the whole name.

The **second column** gives the **BOTANICAL NAME**, in Roman characters, and the following additional information:

The asterisk (*) designates *ornamental-leaved* plants; these plants are grown for their foliage.

The dash (—) designates the repetition of the name above it as applied to the variety to which the dash is prefixed.

in vars. designates *in varieties*, or in mixed colors.

fl. pl. designates *flore pleno*, or double flowered.

The **third column** gives in figures the **COMPARATIVE TIME OF FLOWERING**. As it is impossible in our varied extent of climate to state the exact month any plant may flower in, we have adopted the simple plan of classing the different varieties into *early*, *intermediate* and *late* flowering sorts. Thus:

1 designates *early*—blooming in spring and early summer.

2 “ *intermediate*—blooming in midsummer.

3 “ *late*—blooming in late summer and autumn.

The **fourth column** gives the **DURATION OR CHARACTER**, and **HARDINESS**.

A represents *Annual*—lasting but one year, and producing flowers and seed the same season.

B “ *Biennial*—lasting two years, and generally blooming during the second season.

P “ *Perennial*—lasting three or more years.

E “ *Evergreen*—retaining foliage the entire year.

S “ *Shrubs*—plants of bushy habit.

g “ *greenhouse plants*—such as do best when kept under glass.

bu “ *bulbous plants*—plants forming bulbs or bulbous roots.

. . . designates, in every case, *repetition*.

But as a large number of Biennials and Perennials, if sown early, flower the first season, this distinguishing mark (†) is affixed to such.

The hardiness is denoted by the following abbreviations, but it should be understood that this is intended to apply to the climate of the Middle Atlantic states, and further north or south these designations apply only in a comparative way:

h represents *hardy*—plants for open border.

hh “ *half-hardy*—plants that require to be forwarded in pots or frames.

t “ *tender*—requiring protection.

The **fifth column** gives the **COLOR** in full, except as abbreviated below:

ap. for apetalous . . .	bff. for buff.	lav. for lavender	scar. for scarlet.
blk. “ black	car. “ carmine	ptd. “ painted	spot. “ spotted.
br. “ brown	cr. “ crimson	pur. “ purple	stri. “ striped.
tri. “ tricolor	sul. “ sulphur	var. “ variegated	ver. “ vermilion.

The **sixth column** gives the height in feet to which the plants grow under ordinary cultivation; *trai.* signifies *trailing*; *cr.* stands for *creeping*.

The **seventh column** shows the price per packet at which the flower seeds will be delivered by mail to any postoffice.

The **eighth column** gives brief observations respecting the various classes of plants catalogued, with special directions respecting their culture, where required. As these notes have been very carefully prepared, their suggestions are worthy of attention.

CARNATION, CHA-BAUD'S PERPETUAL.

FLOWER SEEDS.

☛ Flower Seeds delivered free by mail on receipt of the stated price.

☛ See explanation of figures and signs, on page 74.

NUMBER and NAME.		Time of Flowering	Hardiness and Duration	Color of the Flower	Height in Feet	Price per Packet	General Observations.
½ oz. at oz. rate only on articles quoted at \$1 per oz. and over.							
2291	Asters, Truffaut's Pæony Perfection—Dark Blood Red	3	hhA	d, red stri.	1½	10	choicest double sorts. The special attention given of late to the cultivation of the Aster has resulted in the production of many truly magnificent varieties. Among them we may mention the <i>Victoria</i> , which produces the most beautiful and perfectly-formed flowers, and is also the best for pot culture; the <i>Triumph</i> , deep scarlet and white, are very effective for bedding or pot culture. For cutting and bunching, the long-stalked, perfectly globular flowers of the <i>Jewel</i> are especially desirable. The <i>Truffaut</i> class is remarkable for its large incurved flowers and the brightness of the colors. The <i>Washington</i> varieties have extra large, perfectly-formed flowers, resembling somewhat a double <i>Zinnia</i> . <i>Imbricated Pompons</i> are very handsome, and most suitable for bouquets. In this latitude Asters should be sown from the middle of March to the first part of May, on a spent hotbed or in pots or shallow boxes, in a frame or in the house. When an inch high, they should be transplanted into fine soil spread over a discarded hotbed, whence they can be bedded out when three or four inches high. This should be done before or during showery weather. Asters do finely sown in the open ground from the middle to the last of May. The only objection to this mode is their late and short duration of flowering. They can also be grown in pots successfully. Use fine and rich soil, and keep well watered.

COLLECTIONS.

We invite careful attention to the collections offered below. These are put up in Germany, by men of long experience in selecting the best flowers, and contain only seed saved from the very finest plants. In each collection the colors are separate; for instance, the collection of 24 Truffaut's Pæony Perfection contains 24 separate and distinct colors or varieties of the class.

Balsams—								
2352	Double White . . . per oz., \$1 00	..	hhA	white	..	10	(Impatiens.) These are magnificent and popular summer-flowering annuals, producing masses of most perfectly formed and brilliantly colored flowers in the greatest profusion. They prefer a rich, sandy soil, and must be kept well watered. Transplanting two or three times has a tendency to dwarf them and make the flowers more double. The collections of Camellia-flowered and Rose-flowered are exceedingly fine.

2571	*Canna, Dark-leaved . per oz., 40c.	1 3	gP	mixed	4	5	Cannas, or Indian Shot, are very ornamental, and much employed in sub-tropical gardening for groups and masses. With rich soil and a sheltered situation they will flower freely through the summer and late into the autumn. The Crozy varieties are famous for the beauty and size of their flowers. They are excellent for forcing and pot-work, and their flowers present quite new shades of color.
2572	*Fine Mix'd, Green-le'v'd, oz., 20c.					5	Madame Crozy is particularly fine, having very large flowers, of a splendid, bright vermillion, bordered with golden yellow, and handsome light green foliage. All the sorts are also very effective indoors.

3752	<i>Pansy</i> , "Black "Faust" oz., \$1.25	1 3	hA	black	1/2	10	(Viola tricolor; Heart's-ease.) Most of the varieties are saved from fine, choice flowering plants. They cannot be surpassed in color or blooming qualities. They should be carefully cultivated, and will richly pay for good treatment in their large flowers and foliage. The seeds should be sown early in autumn, if large flowers are expected, and preferably in a frame. If sown in spring the flowers will not be as large as from seed sown in autumn. No. 3757 is a new variety, with large peacock-blue flowers, edged with white. No. 3766 has exceedingly beautiful, extra large flowers, with very broad blotches and upper petals finely lined. 3787a is the richest and most choicely varied mixture ever offered. It produces only the handsomest colors and finest forms, and these in great diversity. The collections here offered merit special attention, and are sure to give splendid results. Those marked thus (*) are best for bedding, but all the others also do well for this purpose if planted out early in the spring.

Petunia hybrida—							
3843	Large-flowered, White	2 3	thhA			10	These are well-known, very ornamental plants, producing freely fragrant and beautiful flowers, and continuing a long time in bloom. They do well in the garden, house or conservatory, and will thrive in almost any sort of soil. The newer varieties are of brilliant colors and fine form. <i>The Rainbow</i> has richest colorings, with intense yellow throats. <i>Ring of Emerald</i> has large pink and crimson flowers, bordered with green. <i>The Ruffled Giants</i> are new extra large-flowered sorts, beautifully ruffled, fluted and fringed. 3867 is a dwarf, bushy variety, with regularly striped flowers, and is very effective, either in masses or in pots. <i>Thorburn Superb Giant</i> is a strain of great merit. The flowers are very large and extremely deep-throated; some of them are exquisitely penciled and beautifully fringed. The collections of Large-flowering and Double Fringed here offered contain only the finest varieties.

Phlox Drummondii—							
3875	—atropurpurea striata	2 3	hA	strip.	1	5	The name is from <i>phlox</i> , flame, in allusion to the general brilliancy of the flowers. This is a very elegant genus of flowering plants, being highly colored, especially <i>P. Drummondii</i> , an annual, the varieties of which are of the brightest colors. A bed of these will be highly prized for good habit, richness of color and duration and profusion of bloom. All grow well in pots or as trailers. By making two or more sowings, they will flower till frost. Should be grown in rich, loamy soil, and given

Pink (Dianthus)—							
3963	Chinensis Double Mixed. oz., 40c.	" "	thB	"	1	5	(Dianthus.) Beautiful and ornamental genus; for beauty and sweetness contains some of the most prized flowers we possess. The leaves of the hardy perennials are green all winter. Many can be grown in pots and kept in the house. No garden should be without some of the varieties of the Dianthus family, which for color and fragrance cannot be surpassed. Pinks succeed well in any fairly rich soil, but when the production of large flowers is aimed at, a bed of turfy loam, leaf-mould and well decomposed manure should be specially prepared for them.

4067	Portulaca splendens	2 3	tA	pur.	½	5	These cannot be rivaled for the brilliancy and delicacy of their colors, and are very effective in beds, edgings or rock-work. The last eleven have double flowers, and are very beautiful, many of them resembling miniature roses. The seed of these always contains many single flowers, which bloom earlier than the double ones, and may in this way all be pulled out before the double ones come into flower. Portulacas bloom best in a light, sandy soil. They will not germinate till hot weather sets in, and seed should therefore be sown late.

4156	Primula Sinensis fimbriata rubra		gP	fr. red	¾	25	From <i>primus</i> , first, referring to their early flowering. The Chinese Primroses (<i>Primula Sinensis</i>) are fine for winter and spring blooming; they are free-flowering, and especially valuable for cut-flowers or for house and window culture; a cool place suits them best. The seed is saved from the finest colors and largest flowers. The seed should be sown in light soil, but for the final potting a richer soil is necessary, consisting of two parts loam to one each of well-decayed manure and leaf-mould. They require to be well ventilated, well watered and slightly shaded throughout the summer. The collections here offered contain the finest varieties grown.

4532	Dwarf Large-flowering—						
4532	—Canary Yellow	1 2	hhA	yel.	1	10	ding, massing, edging or pot-culture, being very free and long bloomers, and of much diversity and brilliancy of color. They are also very attractive in form, and richly fragrant. The double white sorts are largely used in summer for bouquets and floral work. In this latitude Stocks should be sown from the middle of March to the first part of May, on a spent hotbed or in pots or shallow boxes, in a frame or in the house; and when an inch high, they should be transplanted into fine soil, which should be spread over a discarded hotbed, whence they can be bedded out when three or four inches high; this should be done before or during showery weather. Transplanting several times in the early stages of growth tends to give them a more compact and dwarf habit. Stocks do well sown in the open ground from the middle to the last of May.

SWEET PEAS.

(*Lathyrus odoratus*.)

These exceedingly beautiful and fragrant hardy annuals are now most popular.

DIRECTIONS FOR CULTURE. — Sweet Peas succeed best in a deep, rich soil. The most approved method of cultivation is to sow in a trench 5 or 6 inches deep, covering them at first with *only one inch* of soil; then as the plants grow, fill in the earth about them *one inch at a time*. After the plants are well grown up, they should be watered copiously, and bone meal worked into the soil about the roots is recommended. Proper trellis or other supports should be provided.

The first sowing of Sweet Peas may be made very early in the spring, as soon as the frost is out of the ground. For a succession, some should be sown every few weeks afterwards. For fall flowering, they may be sown as late as July. Then again, they may be sown late in the fall for very early blooming the following spring, but in that case a dry situation is preferable, and they should be sown 4 or 5 inches deep, and not in the trench method.

Thorburn's Selected Sweet Peas.

Assortments Containing—

1 packet each of 40 named varieties, our own selection	\$1 50

ORNAMENTAL GRASSES.

Many of these Grasses, if cut before they are entirely ripe, will be found useful in the formation of winter bouquets, in connection with the Everlastings.

NUMBER and NAME.	Time of Flowering	Hardiness and Duration	Color of the Flower	Height in Feet	Price per Packet	General Observations.
<small>As ¼ oz. at oz. rate only on articles quoted at \$1 per oz. and over.</small>						
5128 * <i>Agrostis nebulosa</i>	2	hA	apet.	1	5	} Very fine for vases and bouquets. The plumes of <i>A. nebulosa</i> are very delicate.
5130 <i>pulchella</i>	5	
5132 <i>minutiflora</i>	10	
5136 * <i>Andropogon argenteus</i>	3	hP	..	3	5	} Dense flowers, very silky, with bright white hairs.
5138 <i>Arundo Donax</i>	10	5	
5140 *— <i>fol. variegata</i>	10	} Fine subtropical plants of stately growth; ornamental in habit.
5144 <i>Avena sterilis</i>	2 3	hA	..	3	5	
5150 <i>Briza geniculata</i>	2	1	5	} (Quaking Grass.) No 5154 is very pretty for bouquets.
5152 <i>gracilis</i>	5	
5154 <i>maxima</i>	1½	5	
5158 <i>Brizopyrum siculum</i>	¾	5	} Dwarf species of Spike Grass.
5160 <i>Bromus brizæformis</i>	hP	..	2	5	
5162 <i>macrostachyus</i>	5	} No. 5160 is very fine for winter bouquets. To this genus belongs the Cheat Grass, a well-known pest.
5164 <i>madritensis</i>	5	
5165 <i>Chloropsis Blanchardiana</i>	tP	25	} Dwarf; very fine for edgings.
5166 <i>Chloris barbata vera</i>	1	5	
5168 <i>truncata</i>	¾	5	} Elegant for groups, and also good for baskets.
5170 <i>Chrysurus cynosuroides</i>	hA	..	1	5	
5172 <i>Coix lachryma</i>	2 3	1½	5	} (Job's Tears.) So called from the resemblance of the seed to a tear-drop.
5174 <i>aurea zebrina</i>	10	
5175 <i>Cryptopyrum Richardsoni</i>	2	2	10	} Very fine grass.
5175a <i>Cynosurus elegans</i>	hP	5	
5176 <i>Eleusine barcinonensis</i>	2 3	hA	..	1	5	} (Crab or Yard Grass.) <i>E. Indica</i> is the Wire Grass.
5176a <i>corocana</i>	5	
5176b <i>Indica</i>	5	
5178 <i>Elymus hystrix</i>	hP	..	4	5	} From the Crimea. Odd.
5180 <i>Eragrostis elegans</i>	2	hA	..	1	5	
5182 <i>amabilis</i>	5	} (Love Grass.) Pretty Grasses, growing about a foot high, and characterized by their beautiful dancing spikelets; for bouquets.
5183 <i>Abyssinica</i>	5	
5184 <i>maxima</i>	5	
5185 <i>suaveolens</i>	5	
5188 <i>Erianthus Ravennæ</i>	2 3	hP	..	10	5	} (Plume Grass.) A very fine and stately-looking grass.
5190 *— <i>foliis variegatis</i>	10	
5192 <i>Eulalia Japonica</i>	5	10	} Among the most beautiful of the tall-growing grasses.
5196 <i>Festuca glauca</i>	2	10	
5198 <i>Gymnothrix</i> (Pennisetum) <i>caudata</i>	tP	10	} Grown chiefly as curious and ornamental grasses.
5202 <i>latifolia</i>	8	10	
5205 * <i>Gynerium argenteum</i>	5	} (Pampas Grass.) This is the noblest of the tall-growing grasses, and bears magnificent plumes, much used in floral decoration.
5207 *— <i>fol. variegatum</i>	10	
5207a *— <i>roseum</i>	10	
5208 <i>jubatum</i>	10	
5212 <i>Hordeum jubatum</i>	hA	..	2	5	} (Squirrel-tail Grass.)
5213 <i>Isolepis gracilis</i>	½	10	
5216 <i>Lagurus ovatus</i>	2	5	} (Hare's-tail Grass.)
5218 <i>Lasiagrostis argentea</i>	hP	..	3	5	
5225 <i>Panicum virgatum</i>	hA	..	4	5	} Very showy and hardy perennial grasses.
5226 <i>sulcatum</i>	3	10

PALM SEEDS.

 The Palm seeds we offer are imported direct from approved sources in Australia, New Zealand, South America, Central America and the West Indies, and are unexcelled in quality and purity. Fresh seeds arrive throughout the year, as the various species mature, but the greater number come during the spring and summer.

MESSRS. J. M. THORBURN & CO., N. Y.:

messes. I am a HORNBAC & CO. IN. I cannot refrain from telling you of the grand success I had with your seeds, particularly your new Wallflower, which I have not yet had a chance to try. I cannot refrain from telling you that I have not refrained from sowing them in the middle of June, and they have commenced to bloom, and are now loaded with flowers, some of brown, streaked with yellow, others yellow, streaked brown, and of the most penetrating and exquisite perfume. The bushes grew about 2 feet high by 16 inches across, evenly balanced and strongly rooted. I have lifted and potted some of the bushes, in seven-inch pots, and now have them indoors, where the flowers diffuse their sweet perfume through the entire room, calling forth expressions of delight from our visitors. I have been planting flower seeds for the past twenty-five years, but never has such grand success as with seeds purchased from you. Wishing you continued and well-merited success, I am Yours truly,

71 SOMERS ST., BROOKLYN, N. Y., Oct. 31, 1895.

GEO. C. DRINER,
Engineer Corps, U. S. Navy.

Naomi. Light rosy lilac.	10	75	Teresita. Upper petals pure white, suffused with rose and striped carmine at the edges, lower petals pale rose, blotched and striped with bright violet.	10	75
Oriflamme. Rosy orange, a little paler in center; lower petals tinged golden yellow and streaked carmine.	25	2 50			

LILIES. (LILIUM.)

These require very little care. The principal thing, indeed, to be attended to is to forbear disturbing them too often. *L. auratum* cannot bear manure; ordinary light soil suits them best. We call particular attention to the *L. speciosum* (Japan Lilies), which are, next to *L. auratum*, the most magnificent species. Lilies should be planted deep, not less than six inches, and, although hardy, are benefited by a light covering.

If ordered by mail, add 3 cents each for those marked thus (*); others from 1 to 2 cents each for postage.

	Each	Per doz.		Each	Per doz.
*Auratum (Golden-Banded Lily). The grandest of all hardy Lilies; flowers white, spotted with maroon, having a bright yellow band through the center of each petal. The plant grows from 3 to 6 feet high.	\$0 15	\$1 50	Grayi. A very rare and beautiful native Lily from North Carolina. Nodding flowers, bright crimson outside, orange-red inside, spotted with maroon.	\$0 30	\$3 00
" macranthum. Magnificent flowers of perfect form.	40	4 00	Hansoni. Reddish orange, purple-dotted flowers; 3 to 4 ft. high.	85	9 00
* " rubro vittatum. Very large flowers; bright spot; magnificent variety.	75	8 00	* Humboldtii. Orange-red, with claret-colored dots; 4 to 5 feet high.	20	2 00
* " pictum. Has larger dots of red than the common <i>Auratum</i>	40	4 00	Krameri. White, slightly tinged with red; sweet-scented.	15	1 50
" Wittei. Pure white, with raised spots of satiny white; broad yellow stripe through each petal; very large flowers.	75	8 00	Leichtlinii. Canary yellow, with crimson spots; 2 to 3 ft. high.	40	4 00
* Brownii. Creamy white, shaded with chocolate-crimson; an extra large and always rare Lily; 2½ ft.	50	5 00	* Longiflorum. Pure white trumpet of large size.	10	1 00
* Chalcedonicum. Bright scarlet; 2 to 3 ft.	40	4 00	Medeoloides. Fine vermilion flowers.	35	3 50
Concolor. Bright scarlet flowers, 1½ in. long; 2 to 3 ft.	10	1 00	* Speciosum album præcox. Beautiful pure white flowers; 2 to 3 ft. high.	20	2 00
Cordifolium. White, yellow and purple flowers; 3 to 4 ft. high.	20	2 00	" rubrum. Red spotted.	15	1 50
Elegans. Red.	10	1 00	" " Melpomene. Very dark red.	20	2 00
" " Alice Wilson." Large flowers of a pure yellow color; very rare.	75	8 00	* Tigrinum (Tiger Lily). Orange-salmon; 3 ft. high.	08	75
			" splendens. Rich scarlet, with black spots; finest of all Tiger Lilies.	08	75
			" flore pleno. New double Tiger Lily.	10	1 00

AMARYLLIS.

These bulbs, which are so remarkable for their beautiful flowers, should, most of them, be cultivated indoors, and but moderately watered, unless they show indications of flowering. The soil suitable for their culture is a good loam, with one-fourth part of leaf-mould or pulverized manure and a proportion of sand. Frequent disturbance of the roots is to be avoided.

	Each		Each
Belladonna. Violet and white. . per doz., \$2.	\$0 20	Johnsonii. Crimson, striped with white.	\$5 50
" major. Large; violet and white.	35	Lutea (Sternbergia). Bright yellow. per doz., \$1.	10
